

TEXAS COUNTY & DISTRICT RETIREMENT SYSTEM

ANNUAL COMPREHENSIVE FINANCIAL REPORT

For the years ended December 31, 2022 & 2021

BUILT TO WEATHER STORMS

TCDRS' DISCIPLINED FUNDING, DIVERSIFIED INVESTMENTS AND SAVINGS-BASED BENEFITS PROMOTE STABILITY, FINANCIAL STRENGTH & LONG-TERM SUCCESS

Goose Island State Park, located near the town of Rockport, is home to an ancient giant. “The Big Tree,” as locals call it, is not the biggest Virginia live oak in the world, but at possibly more than 2,000 years old, it may well be the oldest.

In its lifespan, many other surrounding trees and structures fell to Civil War-era bombardments, numerous floods, droughts and wildfires, and 40–50 hurricanes that occurred in the area. But The Big Tree stood strong through it all, growing more than 45 feet tall and 35 feet wide, with a crown spread of 90 feet.

Like The Big Tree and the other famous Texas trees highlighted throughout this report, TCDRS has a long track record of strength and resilience. For more than half a century, our disciplined funding, diversified investments and savings-based benefits have helped us weather storms and kept the system anchored in stability and dependability for our members and employers.

SERVING OUR MEMBERSHIP

MEMBERSHIP

We serve a membership of more than 360,000, including more than 82,000 retirees and beneficiaries.

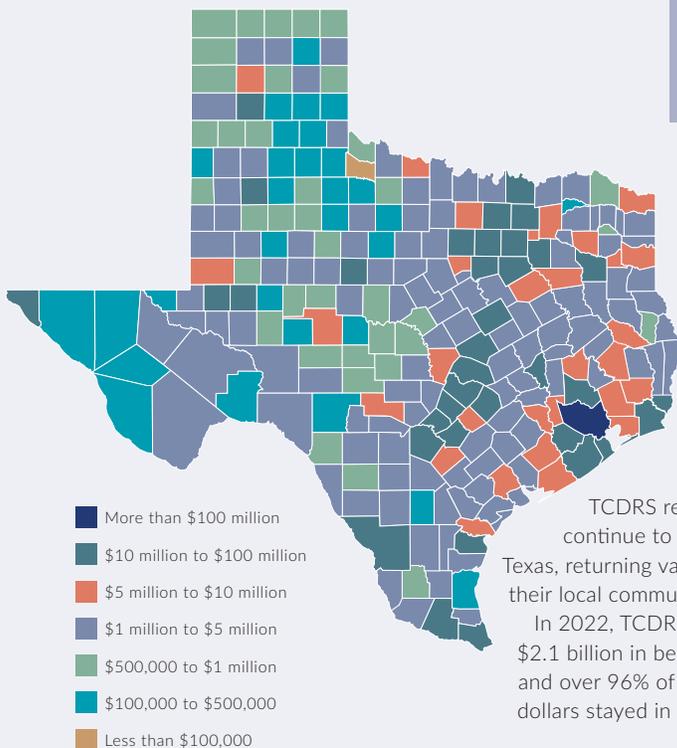

PARTICIPATING EMPLOYERS

Since 1967, the system has grown to include nearly 850 counties and districts.

BENEFITING TEXAS

TCDRS Payments to Retirees by Texas County

TCDRS retirees continue to live in Texas, returning value to their local communities. In 2022, TCDRS paid \$2.1 billion in benefits, and over 96% of those dollars stayed in Texas.

30 YEAR **7.6%**

RESPONSIBLE PLAN FUNDING

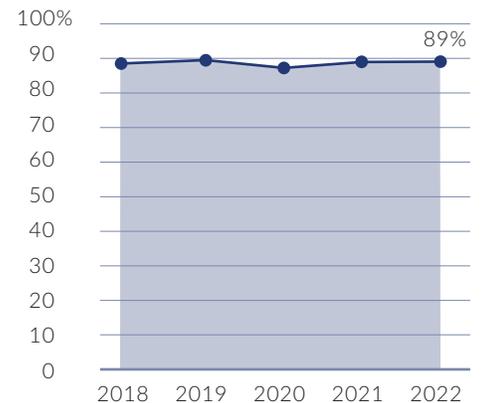

BENEFIT FUNDING

AVERAGE REQUIRED EMPLOYER CONTRIBUTIONS RATES

FUNDED RATIO

Investment earnings fund approximately 74¢ of every dollar of benefits. Employers must pay 100% of their required contributions every year. Each plan is funded independently by a county or district and its employees. Our conservative funding methods ensure any debt is paid down to zero within 20 years. This means money is there when needed, and debt is not pushed to future generations. *All figures as of Dec. 31, 2022, except where noted.*

INTRODUCTORY

GOODNIGHT-LOVING PECAN, PALO PINTO COUNTY

A Texas-Sized Partnership

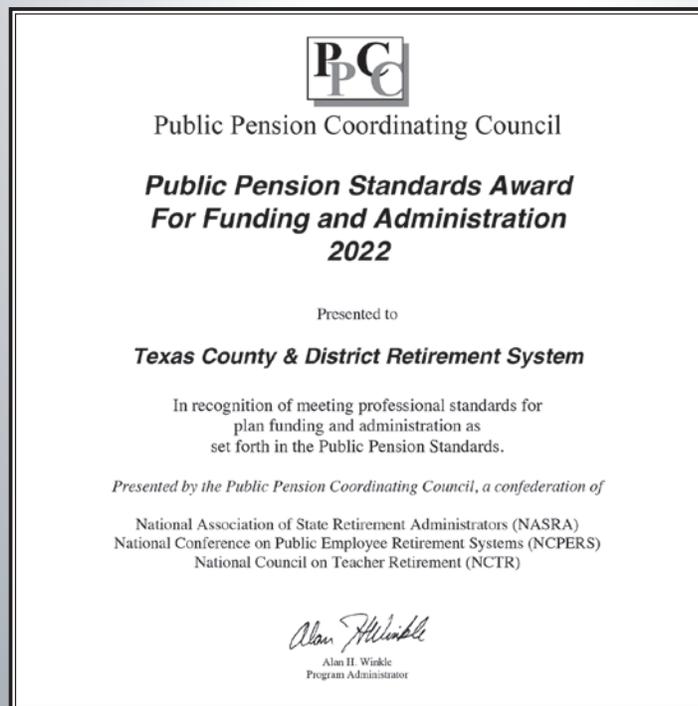

In 1866, two ranchers formed a partnership under the boughs of the Goodnight-Loving Pecan tree and started the primary cattle-driving route between Texas, New Mexico, Colorado and Wyoming. TCDRS partners with Texas employers to power local economies and give hardworking members confidence along their journeys to retirement.

PECAN (CARYA ILLINOINENSIS)

The Certificate of Achievement for Excellence in Financial Reporting was presented by the Government Finance Officers Association of the United States and Canada for the fiscal year ended Dec. 31, 2021. This was the 30th consecutive year that TCDRS has received this prestigious award, which recognizes comprehensive annual financial reports that have achieved the highest standards in government accounting and reporting.

TCDRS was awarded the Public Pension Coordinating Council's Public Pension Standards award for the 20th consecutive year. This award is in recognition of meeting professional standards for plan funding and administration as set forth in the Public Pension Standards.

LETTER OF TRANSMITTAL

June 3, 2023

We are pleased to present the Annual Comprehensive Financial Report of the Texas County & District Retirement System (TCDRS) for the year ended Dec. 31, 2022.

The theme of our annual report this year is Texas trees. One native giant known as "The Big Tree" is a large live oak located in Rockport, Texas. This tree is estimated to be over 2,000 years old and is one of the largest live oaks in the United States. It has survived numerous natural disasters, including hurricanes and droughts, and has become a symbol of resilience and strength.

Like The Big Tree, TCDRS is designed to grow steadily over the long term and is built to weather storms. TCDRS has a strong foundation of roots to anchor our members' futures and support our growth over time. Our disciplined funding, diversified investments and savings-based benefits promote our stability, financial strength and long-term success.

TCDRS continues to be well-funded at 89%, with a reserves fund of \$2.1 billion that may be used to offset future adverse experience.

Since 1967, TCDRS has grown into a nearly \$42 billion trust. Today, we partner with nearly 850 counties and governmental districts to provide reliable retirement, disability and survivor benefits. Our employers value their TCDRS benefit plans in helping them recruit and retain quality staff. The number of participating employers continues to grow and, for the 10-year period ended Dec. 31, 2022, has increased by 32%.

Over the past decade, our membership has risen by 52% as well. We now serve over 360,000 Texans. These public servants make our Texas local communities better and safer places to live as they plan for one of the most important decisions of their life: retirement.

At TCDRS, we are committed to providing our members a secure benefit. Our unique features help make us one of the best-funded retirement systems in the nation. Savings-based benefits that are responsibly funded in advance, as well as flexibility and local control, contribute to the system's success.

The TCDRS Board of Trustees provides leadership for the system. Our nine-person board is appointed by the governor and confirmed by the Texas Senate. The board appoints an executive director, who is responsible for all day-to-day operations, and a chief investment officer, who manages investment operations.

WE DO RETIREMENT RIGHT

Our savings-based plan helps employers provide reliable benefits at a predictable cost. Members save for their own retirements over the length of their careers. At retirement, benefits are based on a member's final savings balance and employer matching.

In 2022, we paid \$2.1 billion in benefits to retirees and former members. Over 96% of these benefits went to Texas addresses. That income serves as an economic engine to our Texas local economies, creating jobs and generating economic activity.

On average, TCDRS retirees start their benefit payments at age 61 after working 18 years. The average annual benefit for current retirees is \$27,120, as of Dec. 31, 2022. The number of retirees has increased over the past decade by 75%.

INVESTMENTS

Because members and employers are saving in advance for retirement, they are getting the maximum power of investment earnings over time. Investment earnings fund approximately 74 cents of every benefit dollar our members receive.

LETTER OF TRANSMITTAL

TCDRS is a long-term investor with a fully diversified portfolio. The TCDRS Board of Trustees constructs the investment portfolio to maximize return within an acceptable level of risk. In 2022, the TCDRS portfolio returned -5.8%, net of all fees. This exceeded our benchmark of -8.8%. Our 30-year return was 7.6% for the period ended Dec. 31, 2022.

The board has adopted, and periodically reviews, an investment policy that defines and restricts investment authority. The policy also emphasizes the importance of a long-term investment philosophy with minimization of risk.

MAJOR INITIATIVES

In 2022, TCDRS delivered enhancements to our technology and services to further our digital transformation and our goal to go paperless by 2023. These efforts are allowing us to better serve our members and employers with fast and convenient account management and are making our processes more secure and efficient.

This past year, we:

- Designed and built technology to support the ability for members to make account updates by phone and complete transactions by providing electronic signatures via DocuSign. In addition, we completed the technical design and implementation of Co-Browse, a powerful feature that lets TCDRS call center representatives see exactly what customers see when providing technical support on the website.
- Made significant progress on information security objectives, including formalizing security policies, continuing implementation of an identity access management program, and developing a cloud access gateway program to better monitor and manage cloud data. Additionally, we continued to strengthen our security posture and conducted frequent security awareness training and penetration testing.
- Continued to modernize and customize our member communications to increase engagement. This included implementing enhanced e-newsletters tailored by career stage, customer journeys for new members and retirees, and a webinar series for members based on career stage.

FUNDING

As of Dec. 31, 2022, TCDRS was 89% funded in aggregate. The actuarial value of assets and liabilities totaled \$40.92 billion and \$46.19

billion, respectively. The fiduciary net position for pension benefits at year end in 2022 and 2021 was \$41.97 billion and \$44.89 billion, respectively. This was a decrease of \$2.92 billion (-6.5%).

The system maintains a reserves position to help keep rates stable and offset future adverse experience. TCDRS' reserves are over 5% of assets. Considering the reserves, TCDRS is nearly 94% funded.

TCDRS does not receive funding from the State of Texas. Each plan is funded by our employers, members and investment earnings. TCDRS has one of the most conservative funding policies in the nation, ensuring that our employers fund their plans responsibly.

By paying 100% of their required contribution rate every year, employers are funding their current employees' future benefits and are on track to pay down any liabilities within 20 years.

The average employer contribution rate increased from 11.8% in 2021 to 12.9% in 2022, primarily due to the lowering of the investment return assumption from 8.0% to 7.5%.

In 2022, almost one-third of TCDRS' participating employers made additional contributions over the required amounts to prefund benefits, pay down liabilities faster or build up reserves within their plan. Each year, employers can adjust benefits and costs prospectively based on their local workforce needs and budgets. This level of flexibility and local control is unique among public pension plans.

Cash flow from deposits and contributions is slightly less than the amounts required to make benefit payments to retirees, withdrawals to former members and administrative expenses. Negative net cash flow is expected as the system matures. Investment returns and changes in employer plans also affect annual cash flow and the change in net position.

To help better understand TCDRS' financial strength, the recent history of net investment income, contributions and deposits, benefit payments and administrative costs is shown in the Statistical Section of this report, which begins on page 81. Information on funding progress for all employers as a group is located in the Actuarial Section within Table 6: Funding Progress (see page 71).

MANAGEMENT RESPONSIBILITY FOR FINANCIAL REPORTING

This report fulfills the requirements established by the Texas Government Code for public retirement systems to publish an annual financial report. TCDRS management is responsible for the accuracy of the data, as well as the completeness and fairness of its presentation, within this report.

The financial statements have been prepared in accordance with the principles of governmental accounting and reporting as set forth by the Governmental Accounting Standards Board (GASB).

We have implemented a comprehensive framework of internal controls to provide reasonable assurance regarding the safekeeping of assets and fair presentation of the financial statements and supporting schedules. Internal controls also provide reasonable, rather than absolute, assurance that the financial statements are free of any material misstatements. The concept of reasonable assurance recognizes that first, the cost of a control should not exceed the benefits likely to be derived; second, the valuation of the cost and benefits requires estimates and judgments by management.

KPMG LLP, Certified Public Accountants, has issued an unmodified (“clean”) opinion on TCDRS’ financial statements for the year ended Dec. 31, 2022. The independent auditor’s opinion is located at the front of the Financial Section of this report (see page 20).

Immediately following the independent auditor’s opinion, Management’s Discussion and Analysis

(MD&A) provides a narrative introduction, overview and analysis of the basic financial statements. The MD&A complements the Letter of Transmittal and should be read in conjunction with it.

AWARDS AND ACKNOWLEDGMENTS

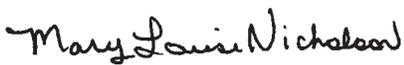

For the 30th consecutive year, TCDRS proudly accepted a Certificate of Achievement for Excellence in Financial Reporting from the Government Finance Officers Association of the United States and Canada (GFOA) for the fiscal year ended Dec. 31, 2021. This prestigious award recognizes legible and efficiently organized annual comprehensive financial reports that satisfy accepted accounting principles and applicable legal requirements.

For 2022, TCDRS also received the Public Pension Coordinating Council’s (PPCC) Public Pension Standards Award for the 20th consecutive year. This award recognizes systems that meet professional standards for plan funding and administration.

SUMMARY

At TCDRS, we are proud to work on behalf of our members and employers to ensure that our system remains strong and sound for the future. Just as it takes effort and care to nurture and maintain a healthy tree, it takes hard work, dedication and perseverance to ensure TCDRS’ success for the future. We thank everyone who has helped to make TCDRS a model for retirement and a benefit that can be counted on by so many Texans.

Sincerely,

Mary Louise Nicholson

Resources on the Road

Since the late 1800s, the La Bahia Pecan tree in Washington County has served as a resting place and food source for weary travelers and traders between Texas and Louisiana. Similarly, TCDRS strives to provide resources and education to help employers make informed decisions about their plans and empower members to get the most out of their benefits.

Independent Auditors' Report

The Board of Trustees
Texas County & District Retirement System:

Opinion

We have audited the financial statements of the Texas County & District Retirement System (TCDRS), as of and for the years ended December 31, 2022 and 2021, and the related notes to the financial statements, which collectively comprise TCDRS' basic financial statements for the years then ended as listed in the table of contents.

In our opinion, the accompanying financial statements referred to above present fairly, in all material respects, the fiduciary net position of Texas County & District Retirement System as of December 31, 2022 and 2021, and the changes in its fiduciary net position for the years then ended, in accordance with U.S. generally accepted accounting principles.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of TCDRS and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with U.S. generally accepted accounting principles, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about TCDRS' ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of TCDRS' internal control. Accordingly, no such opinion is expressed.

KPMG LLP, a Delaware limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about TCDRS' ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control related matters that we identified during the audit.

Required Supplementary Information

U.S. generally accepted accounting principles require that the Management's Discussion and Analysis and the Schedule of Money-Weighted Rates of Return be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with GAAS, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audits of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Supplementary Information

Our audit for the year ended December 31, 2022 was conducted for the purpose of forming an opinion on the financial statements that collectively comprise TCDRS' basic financial statements for the year ended December 31, 2022. The Other Supplementary Information – Changes in Fiduciary Net Position by Fund and Interfund Transfers, Changes in Endowment Fund, Changes in Income Fund, Administrative Revenues and Expenses, Investment Expenses, and Professional and Consulting Services for the year ended December 31, 2022 are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements. The information has been subjected to the auditing procedures applied in the audit of the basic financial statements for the year ended December 31, 2022 and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with GAAS. In our opinion, the Other Supplementary Information – Changes in Fiduciary Net Position by Fund and Interfund Transfers, Changes in Endowment Fund, Changes in Income Fund, Administrative Revenues and Expenses, Investment Expenses, and Professional and Consulting Services are fairly stated, in all material respects, in relation to the basic financial statements as a whole for the year ended December 31, 2022.

Other Information

Management is responsible for the other information included in the annual comprehensive financial report. The other information comprises the Introductory Section, the Investment Section, the Actuarial Section, and the Statistical Section but does not include the basic financial statements and our auditors' report thereon. Our opinion on the basic financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audits of the basic financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the basic financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

KPMG LLP

Austin, Texas

MANAGEMENT’S DISCUSSION AND ANALYSIS

INTRODUCTION

This section provides an overview and analysis of the system’s financial position and performance, focusing on the current year’s results, changes in those results (including three-year trends), and other currently known information. Readers are encouraged to consider this information in conjunction with information provided in other areas of the Financial Section, as well as information presented in the Letter of Transmittal in the Introductory Section.

OVERVIEW OF THE FINANCIAL STATEMENTS

The basic financial statements consist of the Statements of Fiduciary Net Position, Statements of Changes in Fiduciary Net Position and the Notes to the Financial Statements. Required Supplementary Information and Other Supplementary Information are also presented.

- The Statements of Fiduciary Net Position report the assets less liabilities and the resulting net position restricted for pension or insurance benefits at the end of 2022, compared to 2021.
- The Statements of Changes in Fiduciary Net Position report the transactions that occurred during 2022 and 2021 for which additions less deductions equal the net increase or decrease in fiduciary net position.
- Notes to the Financial Statements include additional information not readily evident in the statements themselves. The notes are considered essential to a full understanding of the information provided in the financial statements.
- Required Supplementary Information provides the money-weighted rate of return information.
- Other Supplementary Information provides detailed information, including activity by fund, administrative and investment expenses, and professional and consultant fees and services. These schedules support summary data presented in the basic financial statements.

TCDRS operates two trusts, both of which are accounted for as fiduciary funds. The Pension Trust Fund accounts for and provides retirement, disability and survivor benefits to the employees of participating employers. The Group Term Life Fund (GTLF or Group Term Life) provides a program of group term life insurance for the employees and, if covered, retirees of electing employers. No assets of the Pension Trust Fund may be used to pay any insurance benefit due from the GTLF, nor may assets

of the GTLF be used to pay any benefit due from the Pension Trust Fund. Discussion and analysis is provided separately for each of the two trusts.

The Statements of Fiduciary Net Position and Statements of Changes in Fiduciary Net Position show financial information for both the Pension Trust Fund and the GTLF.

FINANCIAL ANALYSIS: PENSION TRUST FUND

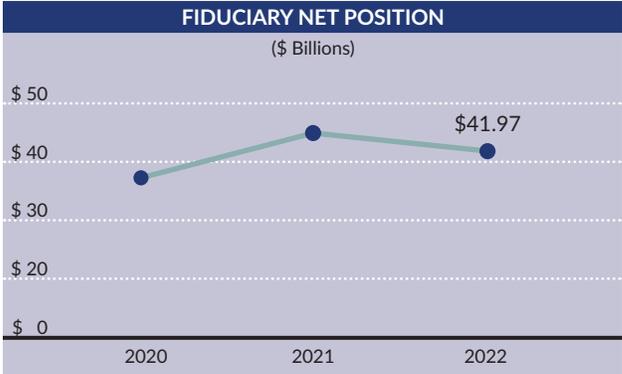

The Pension Trust Fund is comprised of six individual funds, each with a specific operational purpose. Note A in the Notes to the Financial Statements has additional information about each of these funds.

Summary information about fiduciary net position and the changes in fiduciary net position showing comparative detail for 2022, 2021 and 2020 is presented on page 23.

Net position (the amount that assets exceed liabilities) restricted for pensions at year end 2022 totaled \$41.97 billion. The 2021 amount was \$44.89 billion and for 2020 was \$37.11 billion. In 2022, the fiduciary net position decreased by \$2.92 billion, in 2021 it increased by \$7.78 billion, and in 2020 it increased by \$3.28 billion.

The decrease in 2022 fiduciary net position was primarily due to a net investment loss of \$2.60 billion, a -5.8% overall return, net of all fees. Net investment results for 2022 consist of the depreciation in fair value of investments of \$2.74 billion, plus \$180 million in interest and dividends, net income from securities-lending activity of \$1.9 million, less \$49 million of investment activity expenses. Net investment gain in 2021 was \$8.12 billion and in 2020 was a gain of \$3.50 billion.

2022 was a weak year for investment markets with most major asset classes decreasing in value. Central banks across the globe increased interest

MANAGEMENT'S DISCUSSION AND ANALYSIS

rates to combat inflation. The increased interest rates triggered bond prices to fall. Further, the rising interest rates increased the risk of a global slowdown and potentially declining profits which caused equities to fall alongside bonds. The results from investing activities for all asset classes, net of all fees, are presented on page 57.

Additions to fiduciary net position in 2022 included \$588 million in employee deposits and \$1.20 billion in employer contributions. Employee deposits increased \$38 million and employer contributions rose \$127 million over 2021 amounts. In 2021, employee deposits increased by \$14 million and employer contributions rose by \$39 million. Together, employee deposits and employer contributions increased during 2022 by 10.2% and in 2021 by 3.4% over the previous year's amounts.

Deductions for benefits paid and withdrawals for 2022 were \$2.08 billion, a 7.8% increase over the previous year. These deductions for 2021 were \$1.93 billion, a 9.5% increase over 2020, and in 2020, these deductions were \$1.76 billion, a 7.3% increase over 2019. Higher deductions in 2022 and 2021 were due to several factors, including increases in the number of retiree and beneficiary accounts in 2022 (a 4.9% increase) and in 2021 (a 4.8% increase) along with higher average benefits. Withdrawals increased by \$13 million in 2022 and increased by \$18 million in 2021.

FINANCIAL ANALYSIS: GROUP TERM LIFE FUND (GTLF)

The GTLF provides an optional program of group term life insurance for the employees and, if covered, retirees of electing employers. An actuarial valuation is performed annually to determine employers' premium rates and to maintain adequate funding over the long term. Based on actuarial analysis, the amount of fiduciary net position is expected to be sufficient to cover any adverse experience that may occur.

OTHER CURRENTLY KNOWN INFORMATION: PENSION TRUST FUND

TCDRS' investment return for 2022 was -5.8% net of fees, outperforming its benchmark return of -8.8% by 3.0%.

Summary information about fiduciary net position and the changes in fiduciary net position showing comparative detail for 2022, 2021 and 2020 is presented on page 25.

The net position restricted for insurance benefits at year end 2022 was \$46.3 million, an increase of \$2.7 million (6.3%) over the 2021 amount. The increase is due to an interest allocation of \$3.0 million, along with a \$0.3 million decrease in operating income (lower employer premiums than insurance benefits).

For the year ended 2022, employer premiums increased \$0.2 million (4.0%), while insurance benefits decreased by \$1.5 million (-21.9%) related to fewer active members and retirees having claims (down 31.3% and 14.0%, respectively), offset by an increase in average claim amounts by active members of 9.3%.

At year end 2021, the net position restricted for insurance benefits was \$43.6 million, which was an increase of \$1.0 million (2.3%) over the 2020 amount.

For the year ended 2021, employer premiums increased \$0.1 million while insurance benefits rose \$0.4 million.

REQUESTS FOR INFORMATION

This annual report is designed to provide a general overview of TCDRS' finances. Questions concerning any of the information provided in this report or requests for additional information should be addressed to TCDRS, Finance Division, Barton Oaks Plaza IV, Ste. 500, 901 S. MoPac Expy., Austin, TX 78746 or you can send an email to openrecords@TCDRS.org.

NOTES TO THE FINANCIAL STATEMENTS

A: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Reporting Entity

The Texas County & District Retirement System (TCDRS or system) was created in 1967 by the Texas Legislature. The system partners with Texas counties and districts to provide their employees with retirement, disability and survivor benefits. TCDRS is governed by the Texas Legislature and overseen by an independent board of trustees, which is responsible for the administration of the system. TCDRS does not receive state funding. Each plan is funded independently by the county or district, its employees and by investment earnings.

The TCDRS Board of Trustees provides leadership for the system, which serves more than 360,000 TCDRS members and retirees. Our independent, nine-member board is comprised of system members and retirees appointed by the governor and confirmed by the Texas Senate. TCDRS trustees serve staggered six-year terms and have oversight of all system operations, including the annual budget, policy determination, legislative proposals and investment policy. The board appoints an executive director to manage the day-to-day operations of TCDRS and chief investment officer to manage TCDRS investments.

The financial statements of TCDRS have been prepared to conform to generally accepted accounting principles as prescribed by the Governmental Accounting Standards Board (GASB). The accompanying financial statements report the operations of TCDRS, which consists of two fiduciary funds: the Pension Trust Fund and the Group Term Life Fund (GTLF). The Pension Trust Fund is used to provide retirement, survivor, disability and withdrawal benefits and to pay the operating expenses of the system. The GTLF is used to operate a voluntary program of group term life insurance benefits.

New Accounting Pronouncements

In June 2017, GASB issued Statement No. 87, Leases, whose objective is to better meet the informational needs of financial statement users by improving accounting and financial reporting for leases by governments. The statement increases the usefulness of governments' financial statements by requiring recognition of certain lease assets and liabilities for leases that previously were classified as operating leases and recognized as inflows of resources or outflows of resources based on the payment provisions of the contract. It establishes

a single model for lease accounting based on the foundational principle that leases are financings of the right to use an underlying asset. Under this statement, a lessee is required to recognize a lease liability and an intangible right-to-use lease asset, and a lessor is required to recognize a lease receivable and a deferred inflow of resources, thereby enhancing the relevance and consistency of information about governments' leasing activities. The requirements of this statement will be implemented for fiscal years beginning after June 15, 2021. Management has determined that the implementation of GASB 87 has no material impact.

Basis of Accounting

The system's funds are maintained on the accrual basis of accounting. Revenues are recorded when earned and expenses are recorded when incurred, regardless of when payment is made. Employee deposits and employer contributions are recognized in the period the employer reports compensation for its employees pursuant to statutory requirements. Benefit payments are recognized when due and payable in accordance with the plans' terms.

The preparation of financial statements in accordance with accounting principles generally accepted in the United States requires management to make estimates and assumptions. These estimates and assumptions affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

The system invests in a diversified portfolio of assets. Investments, in general, are exposed to various risks, such as interest rate, credit and market volatility. It is possible that changes in the values of investments will occur in the near term and that such changes could materially affect the amounts reported in the financial statements.

Basis of Presentation

TCDRS maintains separate funds and accounts in accordance with the TCDRS Act. This is done to help ensure observance of limitations and restrictions on the use of resources available to TCDRS.

In the Pension Trust Fund, the assets of all employer plans are pooled for investment purposes. However, each employer's plan is accounted for separately, so that each employer's assets are used only for the funding of its individual plan.

The costs of administering TCDRS are paid from investment earnings and general reserves of the pooled assets of all plans.

The TCDRS Act requires that all assets of the retirement system be credited to one of the following funds and accounts, according to the purpose for which they are held:

Employees Saving Fund

The Employees Saving Fund (ESF) contains an account for each member. Each account is increased as a member makes deposits and earns interest. Accounts are reduced due to withdrawals and retirement transfers.

Subdivision Accumulation Fund

The Subdivision Accumulation Fund (SAF) receives employer contributions and contains an account for each participating employer to fund retirement benefits. An account is increased as an employer makes contributions and by transfers from members' ESF accounts at retirement. An account is decreased as employers pay benefits. Annually, the board decides on the income allocation to each employer's account based on investment earnings and the employer's plan assets. Employer accounts increase if there is a positive allocation of earnings; accounts decrease if there is a negative allocation.

Closed Subdivision Annuity Reserve Fund

The Closed Subdivision Annuity Reserve Fund (CSARF) is used to pay benefits to retirees of terminated plans. When a member retires from an employer that is terminated, amounts are transferred from the member's account to the CSARF to fund the member's retirement annuity.

Endowment Fund

The Endowment Fund contains accounts that hold the general reserves of the system, inactive accounts from the ESF and reserves to transfer to the Expense Fund for subsequent year operating expenses. Refer to the schedule of Changes in Endowment Fund on page 48.

General reserves are maintained in the Endowment Fund and have been used to keep rates stable and to help offset future adverse experience. The Endowment Fund may increase or decrease based on income allocation decisions by the board of trustees.

Income Fund

All investment income is credited to the Income Fund. It accounts for investment earnings and expenses, and annual allocations to other funds. The fund is reduced by investment expenses and by the statutory allocation of interest to the ESF, CSARF and GTLF. In addition, the board makes an allocation to the SAF.

If any excess exists after all allocations are made, the remainder is transferred to the Endowment Fund. Refer to the Changes in Income Fund schedule on page 49 for additional information.

Expense Fund

TCDRS pays administrative operating expenses from this fund. As mentioned in the Endowment Fund and the Income Fund, operating expenses are financed from general reserves at the beginning of the year, and the Income Fund finances the investment expenses.

The Group Term Life Fund reports the net position available to pay insurance benefits for covered participants. Premiums paid by employers and an annual income allocation are added to the fund, while insurance benefits are paid from the fund.

Investments

Investments consist of a diversified portfolio, including equities, hedge funds, credit investments, private equity, real assets and investment-grade bonds along with cash and cash equivalents. The portfolio is further diversified within each of the asset classes.

Investment purchases and sales are recorded as of their trade dates. Separately managed fixed income, equity and debt securities are reported at fair value, and are primarily valued using ICE Data Services. U.S. and international commingled funds, hedge fund investments, real estate funds or similar private limited partnership investment vehicles that do not actively trade through established exchange mechanisms are valued at net asset value by a general or managing partner. Security transactions and any resulting gains or losses are accounted for by the specific identification method on a trade-date basis.

For the years ended Dec. 31, 2022 and 2021, the annual money-weighted rate of return on investments, net of investment expenses, was -5.82% and 22.02%, respectively. The money-weighted rate of return expresses investment performance, net of investment expenses, adjusted for the changing amounts actually invested. In the Required

NOTES TO THE FINANCIAL STATEMENTS

Supplementary Information is a table of the annual money-weighted rates of return for the 10-year period ended Dec. 31, 2022.

Capital Assets

Capital assets, which consist of land, building and improvements, software, and equipment and furniture are reported at historical cost and are depreciated on a straight-line basis over the estimated useful lives. TCDRS has elected to capitalize items that individually exceed \$5,000 and have a useful life of greater than one year. The estimated useful lives for building and improvements range from 5 to 40 years, for furniture, fixtures and equipment 3 to 10 years, and for leasehold improvements 3 to 40 years.

B: PLAN DESCRIPTION

Pension Trust Fund

TCDRS is a statewide, agent multiple-employer, public-employee retirement system. The system serves nearly 850 participating counties and districts throughout Texas. Each employer maintains its own customized plan of benefits. Plan provisions are adopted by the governing body of each employer, within the options available in the TCDRS Act. Employers have the flexibility and local control to adjust benefits annually and pay for those benefits based on their needs and budgets. Each employer has a defined benefit plan that functions similarly to a cash balance plan. The assets of the plans are pooled for investment purposes, but each employer's plan assets may be used only for the payment of benefits to the members of that employer's plan. In accordance with Texas law, it is intended that the pension plan be construed and administered in a manner that the retirement system will be considered qualified under Section 401(a) of the Internal Revenue Code. All employees (except temporary staff) of a participating employer must be enrolled in the plan. Membership in TCDRS as of Dec. 31, 2022 and 2021 is summarized in Table 1, on page 31.

Benefits

A percentage of each employee's paycheck is deposited into his or her TCDRS account.

That percentage (from 4% to 7%) is set by the employer.

The employee's savings grow, by law, at a rate of 7%, compounded annually. The employer selects a matching rate — at least "dollar for dollar," up to \$2.50 per \$1.00 in the employee's account.

At retirement, the employee's account balance is combined with employer matching and converted into a lifetime monthly benefit.

Employees receive a month of service time for each month that they make a deposit into their account. The amount of service an employee needs to earn a future benefit is called the vesting requirement. When an employee is vested, he or she has the right to a monthly benefit, which includes employer matching, at age 60 or older. Employers may choose 5-, 8- or 10-year vesting. In addition, employees may retire before age 60 if they meet one of the following requirements, set by the employer:

- **"Rule of" eligibility:** Under these rules, a vested employee can retire if their age plus years of service time add up to at least 75 or 80.
- **20-year or 30-year retirement at any age:** This lets employees retire when they have at least 20 or 30 years of service time.

Retirees elect to receive their lifetime benefit by choosing one of seven actuarially equivalent payment options, which are detailed on page 75.

Employers may elect to provide other optional benefits. Prior service gives employees monetary credit for time worked for an organization before it joined the system. Buybacks allow current employees to re-establish a closed TCDRS account from previous service with an employer. Partial lump-sum payments at retirement allow employees to withdraw part or all of their TCDRS account balance as a lump sum at retirement with a reduced monthly benefit.

In addition, an employer may choose to adopt a cost-of-living adjustment (COLA) for its retirees. This adjusts retiree benefits to restore purchasing power lost due to the effects of inflation.

Contributions

A combination of three elements funds each employer's plan: employee deposits, employer contributions and investment income.

- The deposit rate for employees is 4%, 5%, 6% or 7% of compensation, as adopted by the employer's governing body.
- Participating employers are required, by law, to contribute at a minimum the actuarially required rates, which are determined annually. Employers have the option of paying more than the required contribution rate each year. Extra contributions

Districts	255	238
Total	382	365

can help employers “pre-fund” benefit increases, such as a cost-of-living adjustment to retirees, and they can be used to help offset or mitigate future increases in the required rate due to negative plan experience. There are two approaches for making extra contributions: (a) paying an elected contribution rate that is higher than the required rate and (b) making an additional elective contribution as a lump sum.

- Investment income funds a large part of the benefits employees earn.

Administrative costs of TCDRS are financed through the system’s general reserves, which are part of the Endowment Fund.

Group Term Life Fund (GTLF)

TCDRS also administers the Group Term Life program, a group term life insurance. The fund for this benefit is a separate trust administered by the board. The fund receives monthly premiums from participating employers and pays benefits when due. The obligations of the program are payable only from this fund, and are not an obligation of, or a claim against, the TCDRS Pension Trust Fund. The fund’s assets are pooled with those of the Pension Trust Fund under provisions of the TCDRS Act and annually receive an allocation of income based on the fund value. The Group Term Life program is voluntary and employers can annually begin, change or cease participation. This program provides group term life insurance coverage to currently employed members, and if elected by employers, to retirees. Participation in the Group Term Life program as of Dec. 31, 2022 and 2021 is summarized in Table 1.

Benefits

Current employees of participating employers are insured for an amount equivalent to the employee’s current annual compensation. Employers may also optionally choose to cover retirees. Retirees are insured for \$5,000. Life insurance proceeds are payable as a lump sum. The coverage provided to retirees is an Other Post Employment Benefit (OPEB).

Contributions

Each participating employer contributes to the Group Term Life program at a contractually required rate. An annual actuarial valuation is performed and the contractual rate is equal to the cost of providing one-year term life insurance. The premium rate is expressed as a percentage of the covered payroll of members employed by the participating employer. There is a one-year delay between the actuarial valuation that serves as the basis for the employer contribution rate and the calendar year when the rate goes into effect. Contributions are not intended to pre-fund retiree term life insurance during employees’ careers.

C: TCDRS AS EMPLOYER

Pension Trust Fund

TCDRS, as an employer, participates in the Texas County & District Retirement System. A brief description of benefit terms:

1. All full- and part-time employees in a non-temporary position participate in the plan, regardless

NOTES TO THE FINANCIAL STATEMENTS

of the number of hours they work in a year. Employees in a temporary position are not eligible for membership.

2. The plan provides retirement, disability and survivor benefits.
3. TCDRS is a savings-based plan. For TCDRS, as an employer, 7% of each employee's pay is deposited into his or her TCDRS account. By law, employee accounts earn 7% interest on the beginning of year balances annually. At retirement, the account is matched at an employer-set percentage (current match is 200%) and is then converted to a monthly benefit.
4. There are no automatic COLAs. Each year, TCDRS, as an employer, may elect an ad hoc COLA for its retirees.
5. Benefit terms are established under the TCDRS Act. They may be amended effective Jan. 1 each year within parameters set forth in the Act.

TCDRS, as an employer, has a contribution rate that is calculated annually on an actuarial basis, although TCDRS may elect to contribute at a higher rate. The contribution rate is based on the TCDRS funding policy adopted by the TCDRS Board of Trustees and must conform with the TCDRS Act. Contributions to the pension plan from TCDRS, as an employer, for 2022, were based on the elected rate of 13.5%, plus a one-time lump-sum amount of \$240,000.

TCDRS' contributions, as an employer, to the Pension Trust Fund for the years ended Dec. 31, 2022 and 2021 were \$2.2 million and \$2.4 million, respectively.

Group Term Life Fund

TCDRS participates in the Group Term Life program. For a general explanation of the Group Term Life program, turn to page 31. TCDRS provides coverage to current eligible employees and to retired employees.

TCDRS, as an employer, contributes to the Group Term Life program at an actuarially determined rate.

TCDRS' contributions, as an employer, to the Group Term Life program for the years ended Dec. 31, 2022 and 2021 were \$36,383 and \$32,806, respectively, which equaled the required contributions each year.

TCDRS Bridge Program Health Reimbursement Arrangement

TCDRS adopted the TCDRS Bridge Program Health Reimbursement Arrangement (Bridge Program) for its employees. The program is open to all former TCDRS employees who meet all three conditions: (a) employed with TCDRS on or after Jan. 1, 2007;

(b) accumulated at least 10 years of full-time employment with TCDRS; and (c) an active TCDRS employee on or after attaining age 58½.

The Bridge Program is a self-insured medical expense reimbursement plan that provides a maximum credit of \$550 per month for 60 consecutive months. Coverage begins on the first day of the month immediately after the eligible former employee reaches age 60 or has separated from employment with TCDRS, whichever occurs later.

As of Dec. 31, 2021, the measurement date, the Bridge Program OPEB (Other Post Employment Benefit) liability was \$1,197,804. The plan is unfunded and the discount rate at Dec. 31, 2021, was 2.06% with 137 active members. TCDRS' contributions as an employer pays the benefits under the Bridge Program by reimbursing eligible expenses. For the years ended Dec. 31, 2022 and 2021, benefits paid were \$86,361 and \$68,366, respectively.

Deferred Compensation

The employees of TCDRS may participate in a deferred compensation plan created in accordance with Internal Revenue Code Section 457. This plan, available to all employees of TCDRS, permits the deferral of a portion of their salary until future years. The deferred compensation is not available to the employees until termination, retirement, death or certain unforeseeable emergencies. All compensation deferred under the plan is held by a custodian for the exclusive benefit of participants and beneficiaries.

D: CASH AND CASH EQUIVALENTS

Cash and cash equivalents consist of funds on deposit with a financial institution in interest-bearing demand deposit accounts. They are invested on an overnight basis (sweep) in a U.S. dollar-denominated investment under a repurchase agreement. The funds are collateralized at 102% using U.S. Treasury, government or agency securities. Cash held in (1) demand deposit accounts, (2) the overnight sweep, and (3) the JPMorgan U.S. Government Money Market Fund (an open-end institutional money market fund) is available to pay benefits, operational expenses and funds awaiting transfer to investment management.

Custodial credit risk is the risk that in the event of a bank failure, the system's deposits may not be returned to it. A discussion of custodial credit risk pertaining to cash and cash equivalents can be found in Note G, beginning on page 35.

E: INVESTMENTS

Investment decisions of the board are subject to Section 67, Article XVI of the Texas Constitution, and to the applicable statutory provisions of the Texas Trust Code that provide for a “prudent person” standard of care. Investment authorization is restricted by the investment policy adopted by the board that emphasizes the importance of a long-term investment philosophy with minimization of risk while targeting an attractive risk-adjusted return. The board has determined that a diversified portfolio will offer the best opportunity to produce the desired risk-adjusted return. Accordingly, the TCDRS investment portfolio includes investments in the following asset classes:

Equity Holdings

The system’s U.S. equities and a portion of its developed international and emerging market equities are passively managed in commingled index funds designed to replicate the performance of broad market indices. The remaining developed international, emerging market and global equities are actively managed in commingled funds or limited partnerships.

Hedge Funds

The vehicles for hedge fund investments are typically commingled vehicles, such as limited partnerships, limited liability companies or offshore corporations. At Dec. 31, 2022, the system’s hedge fund portfolio consisted of 16 partnerships with a fair value totaling \$2.6 billion. In comparison, at Dec. 31, 2021, the system’s hedge fund portfolio consisted of 19 partnerships with a fair value totaling \$2.9 billion.

Credit Investments

The board has divided the credit asset class into three portions.

- The strategic credit portfolio is driven primarily by credit risk and includes a combination of traded

non-investment-grade bonds and private credit opportunities. These assets provide potential for high returns and exhibit low correlation to the broader credit markets. As the market environment changes, various credit strategies move in and out of favor. TCDRS alters investment concentration among strategies to optimize the opportunity set for any given market environment.

- Distressed debt partnerships invest in securities of companies whose debt has declined in value because they are experiencing financial stress. Typical holdings are senior and subordinated debt instruments.
- Direct lending partnerships consist of privately originated debt made to small and medium-sized companies or to real estate investors in order to take advantage of dislocations in the capital markets.

Table 2 lists the committed and unfunded capital to private strategic credit, distressed debt and direct lending investments at Dec. 31, 2022. During the first quarter of 2023, there were no additional commitments to strategic credit, direct lending or distressed debt funds.

Private Equity

TCDRS’ private equity investments consist of partnerships that (a) take public companies private in order to improve their operations and then resell them in the future; (b) invest in start-up companies with new ideas or technologies; and (c) invest in companies seeking to discover, produce, and transport energy products.

Table 2 lists the committed and unfunded capital to private equity investments at Dec. 31, 2022. During the first quarter of 2023, an additional \$450 million has been committed to private equity partnerships.

Real Assets

- Real estate investment trusts (REITs) are companies

TABLE 2: SCHEDULE OF UNFUNDED COMMITMENTS

Investment Category	Dec. 31, 2022		
	Total Commitment	Unfunded Commitment	Fair Value
Strategic Credit	4,587,411,719	287,924,143	4,401,966,102
Distressed Debt	3,007,519,607	832,586,399	1,627,628,322
Direct Lending	9,023,153,366	3,487,626,729	5,924,041,616
Private Equity	16,678,878,550	5,632,279,428	11,558,996,580
Private Real Estate	4,856,725,607	2,230,944,091	2,185,772,991
Total Commitments	\$ 38,153,688,849	\$ 12,471,360,790	\$ 25,698,405,611

NOTES TO THE FINANCIAL STATEMENTS

that own and operate income-producing real estate, such as commercial office buildings, apartments, malls, warehouses and storage facilities. Under provisions of the U.S. tax law, if REITs pay out most of their income in dividends, they are not required to pay income taxes. Consequently, substantial amounts of income can be received from investing in REITs.

- Private real estate partnerships acquire and operate commercial properties including office buildings, apartments, hotels, malls and residential real estate. Private real estate investments are illiquid and typically have expected holding periods of 10 to 12 years. As reported in Table 2, on page 33, at Dec. 31, 2022, TCDRS had committed \$4.9 billion to 65 private real estate partnerships. There were no additional commitments made during the first quarter of 2023 to private real estate partnerships.
- Master Limited Partnerships (MLPs) are publicly traded partnership interests authorized by Congress to encourage investment in domestic energy infrastructure. At the entity level, these interests are tax free provided that 90% of their income comes from natural resources such as oil, natural gas, coal, timber and other depletable resources.

Investment-Grade Bonds

The investment-grade bond portfolio consists of debt instruments issued by the United States Treasury and governmental agencies, asset-backed securities, and corporate bonds that are rated investment grade by the major ratings agencies. Additionally, this portfolio may contain minimal investments in short-term instruments, non-rated securities, private placement securities, convertible bonds and preferred stock.

The portfolio should exhibit an overall dollar-weighted average quality rating of AA with no investment rated lower than BBB- or equivalent as rated by Standard & Poor's (S&P), Moody's Investor Service or Fitch Investor's Service at the time of purchase or, if not rated, be deemed by the manager to be of similar quality.

Cash and Cash Equivalents

The TCDRS Board of Trustees may select one or more commercial banks, depository trust companies or other entities to serve as custodian or custodians of the system's cash, cash equivalents and short-term investments, and may authorize the custodian to invest the cash in such short-term investments as the board determines. TCDRS has authorized its custodian to invest cash, on an overnight basis, in the custodian's Collective Trust Government Short-Term Investment Fund (STIF). The investment objective

of the STIF is to provide safety of principal, daily liquidity and competitive returns. The STIF owns high-quality debt instruments (which include U.S. government or U.S. government agencies, repurchase agreements, floating-rate notes, etc.). At Dec. 31, 2022, the dollar-weighted average maturity of the STIF was 6 days with an average current yield of 4.16%. In comparison, at Dec. 31, 2021, the dollar-weighted average maturity of the STIF was 56 days with an average current yield of 0.00%.

The investment officer manages cash in the STIF together with new contributions until they are allocated to a portfolio.

F: SECURITIES LENDING

State statutes and the board's policies permit TCDRS to use its investments to enter into securities-lending transactions – loans of securities to broker-dealers and other entities in exchange for collateral with a simultaneous agreement to return the collateral for the same securities in the future. The system's custodian, The Bank of New York Mellon Corp. (BNY Mellon), is engaged as the lending agent to lend securities from the system's REITs, MLPs, High-Yield and Investment-Grade Bond portfolios for collateral of a minimum of 102% of the fair value of securities loaned.

Collateral, either cash or U.S. government securities, is initially pledged for the securities on loan and additional collateral is required from the borrower by the close of the next business day if its value falls to less than 100% of the fair value of the securities on loan. TCDRS does not have the ability to pledge or sell securities received as collateral unless the borrower defaults. At Dec. 31, 2022 and 2021, BNY Mellon held \$46,487,540 and \$49,071,197 of non-cash collateral, respectively.

**TABLE 3:

¹ Included in the fair value of Credit investments reported in Statements of Fiduciary Net Position on page 26.

Cash collateral is invested in short-term fixed-income instruments in accordance with the system's securities-lending guidelines. Table 3 lists the categories of cash-collateral investments at Dec. 31, 2022 and 2021.

At the end of years 2022 and 2021, TCDRS had no credit risk exposure to borrowers because the amounts the system owed to borrowers (cash plus non-cash collateral) exceeded the amounts the borrowers owed to TCDRS. The contract with the lending agent requires the agent to indemnify TCDRS if borrowers fail to return the securities (and if the collateral is inadequate to replace the securities on loan) or fail to pay TCDRS for income distributions while the securities are on loan. At Dec. 31, 2022 and 2021, the fair value of securities on loan for cash and non-cash collateral was \$333,506,634 and \$484,985,924, respectively.

Additionally, TCDRS invests in two commingled domestic and international equity portfolios that participate in securities-lending programs managed by State Street Global Advisors. TCDRS receives a proportionate share of the securities-lending income generated from these activities.

G: DEPOSIT AND INVESTMENT RISK

Identification of credit risk, custodial credit risk, concentration of credit risk, interest rate risk and foreign currency risk is promulgated by GASB Statement No. 40.

Credit risk is the risk that an issuer of an investment will not fulfill its obligation to the holder of the investment. This is measured by the assignment of

a rating by a nationally recognized statistical rating organization. At both Dec. 31, 2022 and 2021, according to Standard and Poor's (S&P) evaluations, the investment-grade bond portfolio exhibited an overall quality rating of AA-. The Bloomberg U.S. Aggregate Bond Index is the benchmark for performance measurement of the investment-grade bond portfolio. At both Dec. 31, 2022 and 2021, the Bloomberg U.S. Aggregate Bond Index had an average S&P quality rating of A-1+.

At both Dec. 31, 2022 and 2021, according to S&P evaluations, the high-yield portion of the credit portfolio exhibited an overall quality rating of B+. The FTSE High-Yield Cash-Pay Index is the benchmark for performance measurement of the credit portfolio. At both Dec. 31, 2022 and 2021, according to S&P evaluations, the benchmark exhibited an average quality rating of B+.

The investment policy does not explicitly outline an acceptable level of credit risk for the investment-grade bond or credit portfolios, but the board's adoption of their respective benchmark indices is an implicit adoption of the market risk inherent in these portfolios.

Table 4 lists the credit risk associated with the investment-grade bond portfolio and the high-yield bond portion of the credit investments portfolio.

At Dec. 31, 2022, according to Moody's Investors Service evaluations, the BNY Mellon STIF contained short-term securities with quality ratings of P-1 (Prime-1), which exhibit a superior ability for repayment of senior short-term debt obligations, and long-term investments (maturity date greater than

NOTES TO THE FINANCIAL STATEMENTS

Asset Class	Dec. 31,		2021	
	2022	Effective Duration in Years	Fair Value	Effective Duration in Years
Investment-Grade Bonds	\$ 913,722,295	6.1	\$ 1,045,376,299	6.2
High-Yield Bonds ¹	132,337,596	3.8	145,496,437	3.9

¹ Included in Credit investments reported in the Statements of Fiduciary Net Position on page 26.

one year) with an average quality rating of Aaa. Based upon the fair value of the fund at Dec. 31, 2022, 55% of the instruments were rated P-1, 45% of the instruments were rated Aaa and less than 1% was held in cash.

At Dec. 31, 2021, according to Moody's Investors Service evaluations, the BNY Mellon STIF exhibited average short-term quality ratings of P-1 and an average long-term quality rating of Aaa with 81% of the instruments rated P-1, 19% of the instruments rated Aaa and less than 1% was held in cash.

Custodial credit risk is the risk that, in the event of the failure of a depository financial institution, TCDRS will not be able to recover deposits or will not be able to recover collateral securities that are in the possession of an outside party. TCDRS requires that demand deposit accounts be fully collateralized. Funds received by its master custodian are invested on an overnight basis or, if the funds are received late during a business day, are maintained in a U.S. dollar-denominated interest-bearing deposit account insured by the FDIC.

TCDRS investments, evidenced by securities in physical or book entry form and not on loan, are registered and held in safekeeping for TCDRS by its custodian bank.

Concentration of credit risk is the risk of loss attributed to the magnitude of investment in a single issuer. Investment guidelines established with the individual investment managers generally address concentration risk limits. At Dec. 31, 2022 and 2021, TCDRS did not have investments in any one issuer which were greater than 5% of net investments.

Interest rate risk is the risk that changes in market interest rates will adversely affect the fair value of an investment. The values of portfolios of longer duration are more affected by interest rate changes than are those of shorter duration. Increases in bond market yields result in fair value losses; decreases result in fair value gains. Multiplying the change in market yield by the duration of the portfolio

can approximate the size of the gain or loss in fair value. For example, if one owned a portfolio of investment-grade bonds that had a duration of 6.5 years and if the yields within the bond market were to immediately fall 1%, the fair value gain of the portfolio would approximate 6.5%. This change in fair value indicates the level of interest rate risk inherent in the portfolio.

Table 5 discloses the level of interest rate risk inherent in the TCDRS fixed-income portfolios by reporting the effective duration of those portfolios.

The effective duration of the Bloomberg U.S. Aggregate Bond Index at Dec. 31, 2022 and 2021 was 6.3 and 6.7 years, respectively.

The high-yield bond portion of the credit portfolio is measured against the FTSE High-Yield Cash-Pay Index. The effective duration of the FTSE High-Yield Cash-Pay Index at Dec. 31, 2022 and 2021 was 4.2 and 3.9 years, respectively.

TCDRS does not have a formal policy governing interest rate risk, but the board's adoption of the respective benchmark indices used to measure the investment-grade bond and credit portfolios against is an implicit adoption of the market risk inherent in these portfolios.

The maturities of the investments made with cash collateral may not match the maturities of securities on loan. Any material interest rate risk on investments from cash collateral received from securities lending is mitigated by maintaining an investment yield higher than the rebate rate owed to borrowers. Further, to reduce risk, investment guidelines require floating-rate instruments to reset no less frequently than 90 days or limit maturity of fixed-rate instruments to no more than 18 months.

Foreign currency risk is the risk that changes in exchange rates will adversely affect the fair value of an investment or deposit. The asset allocation plan adopted in the investment policy includes a 13.5% allocation to international and global equities, a

Total subject to currency risk	\$ 17,052	\$ 491,748	\$ 212,979,690	\$ 154,779,735	\$ 1,179,309,792	\$ 1,286,441,436	\$ 1,392,306,534	\$ 1,441,713,920

Due to rounding, totals and detail may not equal.

4% allocation to distressed debt, a 2% allocation to REITs, a 2% allocation to MLPs, a 16% allocation to direct lending, a 6% allocation to private real estate partnerships and a 25% allocation to private equity, all of which allow non-U.S. dollar-denominated investments. TCDRS does not have a formal policy governing foreign currency risk. Accordingly, the foreign currency risks inherent in the benchmark indices assigned to these asset classes have been implicitly adopted as an acceptable level of foreign currency risk.

Table 6 lists the foreign currency risk associated within the REITs, MLPs, credit investments, private equity and private real estate partnerships portfolios.

Additionally, at Dec. 31, 2022 and 2021, the international equity portfolio contained nine commingled funds from the Developed International, Emerging Market and Global asset classes. These asset classes are subject to foreign currency risk with an aggregate fair value of \$5,217,924,744 and \$6,266,649,490, respectively.

Derivative instruments are financial contracts whose values depend on the values of one or more underlying assets, reference rates or financial indexes. The investment policy does not explicitly outline the use of derivatives, but investment guidelines allow the investment-grade bond managers the use of exchange-traded treasury futures to replicate cash investments or to manage yield curve or other risk positions within their portfolio. In 2015, the board approved the implementation of a currency overlay program to the passive developed international equity and emerging market allocations managed by State Street Global Advisors using foreign currency forward contracts which are over-the-counter (OTC) instruments used to hedge volatility in currency exchange rates on

assets held within these portfolios. TCDRS' derivative instruments are considered investments and not hedges for accounting purposes. In 2016, the overlay program was suspended but may be re-engaged at a future date.

Table 7, on page 38, lists TCDRS' exposure to derivative instruments at Dec. 31, 2022.

H: FAIR VALUE MEASUREMENT AND APPLICATION

TCDRS categorizes fair value measurements of investment assets and liabilities within the fair value hierarchy established by generally accepted accounting principles as promulgated by GASB Statement No. 72. These investments are valued through industry standard practices for the respective type of security at a price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The hierarchy classifications are based on the transparency of inputs to the valuation techniques used and should not be perceived as the particular investment's risk. These classifications are summarized into three broad levels, arranged from highest to lowest:

Level 1 – Unadjusted inputs using quoted prices in active markets or exchanges for identical investments.

Level 2 – Other significant observable inputs including quoted prices of securities that are comparable in coupon, rating, maturity and industry. Inputs other than quoted prices that are observable take into account operational, market, financial and non-financial factors (interest rates, yield curves, credit risk, and default rates) or other market corroborated inputs that are observable at commonly quoted intervals for the full term of the investment.

NOTES TO THE FINANCIAL STATEMENTS

Total					\$ 61,983,432	\$ 61,912,415	\$ 71,017

Due to rounding, totals and detail may not equal.

Level 3 – Significant inputs that are not observable and cannot be corroborated by observable market data (assumptions, cash flows or earnings multiples).

In instances where inputs used to measure fair value fall into different levels in the fair value hierarchy, fair value measurements in their entirety are categorized based on the lowest level input that is significant to the valuation. The assessment of the significance of particular inputs to their fair value measurements requires judgment and considers factors specific to each asset.

In 2022 and 2021, there were no changes in valuation techniques that had a significant impact on the result.

Short-Term Securities

Holdings in short-term securities at Dec. 31, 2022 and 2021 consist of a Government Short-Term Investment Fund (STIF) which invests principally or entirely in securities or other obligations issued by or guaranteed by the U.S. government or its agencies and repurchase agreements collateralized by securities or other obligations issued by or guaranteed by the U.S. government. TCDRS classifies the STIF at level 2 based on the availability of a daily value, traded in an inactive market.

Equity, Debt and Other Securities

Equity and debt securities classified in level 1 are valued using prices quoted in active markets. Investments classified in level 2 are derived using

either a bid evaluation or a matrix pricing technique. Bid evaluations may include market quotations, yields, maturities, call features and ratings. Matrix pricing is used to value securities based on the securities' relationship to benchmark quoted prices. Index-linked securities are valued by using multiples of the external market price and the index ratio. Level 3 debt securities at Dec. 31, 2022 and 2021 are impaired assets and are valued using unobservable inputs in inactive markets, such as proprietary information or single source pricing.

Commingled funds are valued daily or monthly through an exchange or provided by the investment manager. Funds where pricing is obtained daily are considered to be in an active market and are listed in level 1, and monthly priced funds are listed in level 2.

Investments Measured at the Net Asset Value (NAV)

For assets that are measured at the NAV per share (or its equivalent), the non-lagged year-end valuation provided by the fund manager is used. All partnerships provide audited financial statements with unmodified opinions, along with unaudited quarterly reports. In addition, TCDRS confirms additional information regarding the underlying holdings and TCDRS' ownership percentage of the total limited partnership.

Commingled Funds

The commingled funds with fair values reported at NAV per share (or its equivalent), such as member

units or an ownership interest in partners' capital to which a proportionate share of net assets is attributed, are reported in Tables 8 and 9 disclosures on pages 40–43, along with their redemption restrictions.

Hedge Funds & Strategic Credit Funds

Most hedge funds and strategic credit funds are organized as limited partnerships under the laws of Delaware and use partnership accounting methodologies. These partnerships may invest their assets directly or through a master fund and may also use a wider range of investment techniques such as leverage, short selling and derivatives to achieve their objectives. The fair value of these investments has been determined using the NAV per share or its equivalent. Due to the inherent uncertainty of valuations of investments that are determined to be illiquid and/or do not have readily ascertainable fair values, the estimates of fair value may differ from the values ultimately realized by the partnership, and those differences can be material. The amount of notice the investor is required to give to the general partner in order to redeem ranges from 45 to 180 days. For hedge funds, investors are generally able to sell their interest in the partnerships at regular intervals ranging from monthly to every two years. Strategic credit funds can be organized using a traditional hedge fund structure, which provides investors regular intervals to sell their interest in the partnership ranging from monthly to annually, or organized using a shorter-duration, private-equity structure which allows for a two-year investment period, one-year harvest period, and an optional one- to two-year extension. Certain funds may allow for the creation of "special investments," which are investments the investment manager believes lack a readily ascertainable fair value, are illiquid, or should be held until the resolution of a special event or circumstance.

TCDRS targets 50% of its hedge fund allocation to equity long/short funds in which the equity securities maintain some level of market exposure (either net long or net short); however, the level of exposure may vary over time. TCDRS targets 5% of its hedge fund allocation to a market neutral strategy designed to maintain no net exposure to the overall direction of the equity market. Event-driven funds, which are targeted at 20% of TCDRS' hedge fund allocation, focus on identifying and analyzing securities that can benefit from the occurrence of an extraordinary corporate transaction or event such as mergers, acquisitions, buyouts, stock splits and bankruptcies. Credit/distressed debt funds can come in the form of bonds, mutual funds or the distressed firm itself.

This strategy has a low correlation with factors that affect the stock markets. While TCDRS has a target allocation of zero percent to the credit/distressed strategy, TCDRS may allocate a maximum of 20% to this strategy. The global macro strategy structures its holdings, such as long and short positions, in order to take advantage of shifts in macroeconomic trends; TCDRS targets 10% of hedge funds to this strategy. The remaining 15% uses a multi-strategy approach, which represents a mix of the other hedge fund strategies.

Private Equity

Private equity is risk capital provided outside of the public markets. Investments are illiquid and traded only on acquisition or exit. The term private equity is very broad and includes many types of investments. TCDRS targets 50% of its private equity allocation to buyout funds which include investments in acquisitions, growth equity, recovery investments, and special situations (a class which represents a diversified strategy across many sub-classes). Buyouts use leverage (debt), aggressive restructuring and the purchase of large controlling stakes in the portfolio companies. Venture capital includes funds that invest in companies in a range of stages of development from start-up/seed-stage, early stage, and later/expansion stage. TCDRS targets 25% of its private equity allocation to venture capital funds. TCDRS targets 5% of its private equity allocation to real assets. Funds that invest in real assets have a return linked to inflation, such as energy or other commodity-based investments. The remaining allocation to private equity targets non-U.S. investments. These may be buyout, venture capital or real assets.

The fair value of these investments has been determined using the NAV per share or its equivalent. The fund managers determine fair value of these funds by reference to observable valuation measures for comparable companies or transactions, adjusted for differences between the investment and the referenced comparable, and in some instances by reference to option pricing models or other similar methods. Inputs may include, but are not limited to, significant developments such as meaningful third-party transactions, material progress or slippage in the development of the investee company's business, a change in the cash or debt on a company's balance sheet, dividend accretion on certain types of securities, valuation of comparable publicly traded companies, significant changes in the overall market environment and discounts for lack of marketability.

NOTES TO THE FINANCIAL STATEMENTS

Private equity investments are illiquid and typically have expected holding periods of 10 to 12 years. These investments are not eligible for redemption. Distributions from each fund are received as the underlying investments in the funds are liquidated.

Distressed Debt

Distressed debt includes investments in the debt instruments of companies which may be publicly traded or privately held that are financially distressed and are either in bankruptcy or likely candidates for bankruptcy. Typical holdings are senior and subordinated debt instruments and bank loans. Gains can be realized by holding the debt until there are some payments by the company at maturity or through distributions of cash, restructured debt or equity resulting from the bankruptcy process. Distressed debt investments are not eligible for redemption. Distributions are received as the underlying investments in the funds are liquidated. Investments are typically made in years one through five with capital typically returned in years three through ten.

Direct Lending

Direct lending partnerships invest primarily in privately originated debt and preferred equity instruments to small and mid-sized companies and privately originated senior and mezzanine debt for

real estate. Direct lending investments may also include other types of yield-oriented non-correlated funds including, but not limited to, royalty streams and aviation leases. Direct lending investments are not eligible for redemption. Distributions are received as the underlying investments in the funds are liquidated, which may take up to three to five years.

Private Real Estate

Private real estate may behave as highly debt-like securities or as highly equity-like securities, depending on the characteristics of the property. Core properties tend to be held for a long time to take full advantage of the lease and rental cash flows that they provide. Value-added and opportunistic real estate achieve a substantial portion of their return from appreciation in value. Value-added real estate can involve repositioning, renovation, and redevelopment of existing properties while opportunistic real estate includes all of these activities as well as the purchase of raw land and ground-up development. These investments are not eligible for redemption. Distributions from each fund will be received as the underlying investments in the funds are liquidated. As a private, non-exchange-traded asset, private real estate funds are illiquid. The life of a private real estate fund is typically 10 to 12 years.

REQUIRED SUPPLEMENTARY INFORMATION AND NOTES

TABLE 10: MONEY-WEIGHTED RATES OF RETURN (UNAUDITED)

The money-weighted rates of return are presented to provide information regarding investment performance, net of investment expenses, adjusted for the changing amounts actually invested.

	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013
Annual money-weighted rate of return, net of investment expenses	-5.82%	22.02%	10.42%	16.58%	-1.85%	14.72%	7.48%	-0.66%	6.84%	16.39%

See accompanying independent auditor's report.

Table 10 presents the money-weighted rate of return which provides information regarding TCDRS' investment performance, net of investment expenses, adjusted for the changing amounts actually invested. The money weighted return and time-weighted performance return may differ due to timing and magnitude of cash flows.

THREE

INVESTMENT

OLD BALDY, MCKINNEY FALLS STATE PARK

Stable Growth

Bald cypress trees, like McKinney Falls State Park's 300-year-old "Old Baldy", can thrive despite flooding and drought thanks to their extensive root systems. These slowly-but-steadily growing trees are a lot like TCDRS' investment portfolio, which has been designed to draw nutrients from diverse sources and balance risk to overcome challenging market conditions.

BALD CYPRESS (TAXODIUM DISTICHUM)

May 2023

Board of Trustees
Texas County and District Retirement System
901 MoPac Expressway South
Barton Oaks Plaza IV, Ste. 500
Austin, Texas 78746

To the members of the Board:

It is our pleasure to be the investment consultant for the Texas County and District Retirement System (hereinafter referred to as "TCDRS") and to report on your investment performance and activities for the year ending 2022. Retained in 2005, Cliffwater LLC provides investment policy development and review, asset allocation analysis, asset class structure analysis, investment manager searches and investment performance monitoring and evaluation to the Board and its staff. In calculating investment performance, TCDRS uses the industry standard time-weighted rate of return methodology (net of fees) based upon market values.

2022 was a year marked by stimulus unwind following the easing of the global pandemic. The Federal Reserve raised interest rates seven times during the year and began quantitative tightening to combat persistently high inflation (December Trailing 12 month CPI-U of 6.42%). As a result, stocks and bonds suffered losses at the same time. The US Total Stock Market Index returned -19.5% and developed international stocks (MSCI World Ex US net Index) returned -14.3%. The 10 Year US Treasury yield started the year at 1.51% and ended the year at 3.87%. Most other risk bearing asset classes also suffered losses throughout the year with longer duration assets suffering the most. Additionally, floating rate debt (that benefited from the rise in cash rates) significantly outperformed fixed rate debt. Correspondingly, high yield bonds returned -10.8% (FTSE High Yield Cash-Pay Index) for the year while bank loans were only down -0.8% (Morningstar LSTA US Leveraged Loan Index). REITs suffered large losses at -24.7% (FTSE NAREIT All Equity REIT Index) while higher energy prices resulted in MLPs returning 30.9% (Alerian MLP Index). Against this backdrop, private equity funds suffered modest losses, but venture capital portfolios where there were publicly traded companies, suffered most. In contrast, direct lending benefited from the rise in short-term rates and was a positive contributor for the year.

TCDRS' diversified investment portfolio decreased in total assets from \$44.8 billion to \$41.9 billion. The one-year total fund return was -5.8%, after fees, which was above the Board's Total Fund Policy Benchmark return of -8.8%. Over 10 years, the fund's 8.3% return exceeds the Board's Total Fund Policy Benchmark return of 6.8%. At the asset class level, TCDRS' passively managed US equities portfolio returned -19.5% for the year. TCDRS' balance of active and passive developed international managers resulted in an -13.9% return, slightly above the benchmark return while the active global equity portfolio returned -17.9%, which was also slightly above the benchmark return. Emerging market equities had an -18.5% return compared to the benchmark of -20.1%. The active REIT portfolio's return of -26.1% was below the benchmark's -24.7% return as real estate suffered from rising borrowing costs. In contrast, the MLP portfolio returned 26.5% compared to the benchmark's 30.9% return as energy costs rose with the economy's re-opening. The active core fixed income portfolio returned -12.5% relative to -13.0% for the benchmark as bonds posted their worst year since the Great Depression. Hedge funds did provide a buffer with the portfolio returning -1.3% compared to its benchmark return of -5.3%. The strategic credit asset class return of -0.2% exceeded the benchmark's -10.8% return while distressed debt also performed well at 5.6%. The private equity program returned -4.6%, outperforming its benchmark return of -7.8%. Direct lending returned 6.4% and the real estate program returned 5.8% for the year. Having a lower bond exposure during a period of rising interest rates and the outperformance of several asset classes, most notably private equity, direct lending and strategic credit, led to the fund exceeding the benchmark.

In terms of asset allocation, the TCDRS Board did not make any asset allocation policy changes during the year. Rather, the private asset classes neared or exceeded their target weights as the public markets suffered large declines. The fund added several strategic credit managers to increase diversification and the fund committed to new private equity, private real estate, distressed debt and direct lending partnerships in accordance with its annual commitment budgets.

Respectfully submitted,

A handwritten signature in blue ink that reads "Kathleen K. Barchick".

Kathleen K. Barchick, Sr. Managing Director

A: THE TCDRS ACT AND INVESTMENT POLICY

Investment decisions of the TCDRS Board of Trustees (board) are subject to the Texas Constitution, the TCDRS Act and the applicable statutory provisions of the Texas Trust Code that provide for a “prudent person” standard of care.

Additionally, the board has adopted, and reviews at least annually, an investment policy that defines investment authority and emphasizes the importance of a long-term investment philosophy with minimization of risk.

B: INVESTMENT PHILOSOPHY AND STRATEGY

The board has established a long-term target investment return of 7.5% and has diversified the TCDRS portfolio to include:

- Equities
 - U.S., international developed, emerging markets, and global equities
- Hedge funds

- Credit investments
 - Strategic credit, distressed debt and direct lending
- Private equity
- Real assets
 - Real estate investment trusts (REITs), commodities, private real estate partnerships, Treasury Inflation-Protected Securities (TIPS) and Master Limited Partnerships (MLPs)
- Investment-grade bonds
- Cash and cash equivalents

(For more information on these types of securities, please see the Glossary on page 90.) The board uses a long-term, strategic approach to asset allocation based upon capital market assumptions that are reviewed and adopted annually. The assumptions in effect as of March 2022 are shown in Table 1 and include the long-term expected return and risk (standard deviation) for each asset class.

C: ASSET ALLOCATION

The board has established asset allocation targets for each asset class within the TCDRS portfolio. Table 2 shows the target allocations in effect during 2022 for each asset class.

TABLE 1: CAPITAL MARKET ASSUMPTIONS

As of Jan. 1, 2022

D: ASSET CLASSES, INVESTMENT STYLES AND INVESTMENT MANAGERS

TCDRS uses both active and passive styles of investment management. The passive style seeks to match the performance of an established market index by holding the same securities as the index. An active style seeks to exceed the performance of a benchmark by allowing the manager to actively trade securities that may be different from the index.

Asset classes managed passively are U.S. equities and a portion of the developed international and emerging market equities. The remainder of the assets are actively managed.

The investment manager responsible for an externally managed portfolio holds any cash that portfolio generates in interest-bearing instruments or accounts until it is reinvested. The TCDRS Investment Officer manages cash as well as new contributions in a short-term investment fund until allocated to a portfolio.

E: INVESTMENT RESULTS

TCDRS retains a professional performance measurement analyst that regularly reports investment performance to the board for each investment manager, for the aggregate of all managers in each asset class and for the total portfolio.

Performance Reporting

Performance of each investment manager is measured against the performance of similar assets contained within a benchmark portfolio, as represented by a specific index. Comparisons indicate the value added by each manager, if any, in excess of the performance that was experienced by the specific benchmark index. When multiple investment managers are retained within a particular asset class, a benchmark portfolio is selected for measurement of the performance of the entire asset class. Table 3 identifies the benchmark portfolio associated with each asset class contained within the TCDRS investment portfolio.

A policy benchmark portfolio consisting of individual asset class benchmarks, weighted by asset class target allocation, is constructed for measurement of the performance of the entire portfolio.

Performance Results

The TCDRS portfolio in 2022 returned -5.8% net of fees. 2022 was a challenging year for most investment markets with most major asset classes decreasing in value mainly driven by the rise in interest rates to help combat the rise in inflation. TCDRS' U.S. equities (-19.5%), developed international equities (-13.9%), emerging market

equities (-18.5%), global equities (-17.9%), REITs (-26.1%), investment-grade bonds (-12.5%), and private equity (-4.6%) were all negative. Certain segments of the portfolio were close to flat or even positive in this environment: hedge funds (-1.3%), strategic credit (-0.2%), cash (+1.5%) private real estate (+5.8%), distressed debt (+5.6%), and direct lending (+6.4%).

Johnson & Johnson	U.S. Equities	60.2

¹ TCDRS invests in equity securities through separately managed and commingled equity vehicles. At Dec. 31, 2022, the largest equities contained in the U.S. Equities portfolio represent TCDRS' investment in a State Street U.S. Total Stock Market Index Fund which TCDRS owns a 100% undivided interest in. The remaining securities are individual shares held in the MLP and credit portfolios.

F: LISTS OF LARGEST HOLDINGS¹

Equity Holdings

The system's exposure to equity markets is achieved through participation in commingled investment pools, such as State Street Global Advisors (SSgA) U.S. equity and international equity index funds, and direct investment in separately managed REIT and MLP portfolios. At Dec. 31, 2022, TCDRS' largest equity holdings were in the U.S. equity, credit, and MLP portfolios. Table 5 displays our exposure to the 10 largest equity holdings.

Fixed-Income Holdings

Table 6 presents the top 10 fixed-income securities owned by TCDRS. The securities are contained within the investment-grade bond portfolio. At Dec. 31, 2022, the aggregate fair value of the investment-grade bond portfolio was \$914 million.

¹ A complete listing of all securities TCDRS owned at Dec. 31, 2022, is available upon written request.

G: RESULTS OF SECURITIES-LENDING ACTIVITIES

TCDRS retains The Bank of New York Mellon Corp. as securities-lending agent to engage in lending securities from its portfolios. Securities-lending transactions consist of loans of securities to broker-dealers and other entities in exchange for collateral with a simultaneous agreement to return the collateral for the same securities in the future.

TABLE 6: LIST OF LARGEST FIXED-INCOME HOLDINGS

Dec. 31, 2022 (\$ Millions)

Description	Maturity	Interest Rate	Fair Value

TABLE 7: SECURITIES-LENDING ACTIVITY

Year Ended Dec. 31, 2022

Elements of Securities-Lending Activity	Amount
Gross Earnings	\$ 6,493,316
Less Rebates from Lenders and Lending Agent's Share of Income	5,757,993
Net Securities-Lending Income (Separately Managed Accounts)	735,323
Securities-Lending Income (Commingled Funds)	1,200,058
Net Securities-Lending Income	\$ 1,935,381

The gross income and expenses attributable to securities-lending activity and net lending income of \$0.7 million are shown in Table 7. Additionally, SSgA passively manages the U.S. and international equity portfolios of TCDRS in commingled funds. The securities in these funds participate in the securities-lending program of SSgA with TCDRS receiving a proportionate share of the securities-lending income generated from this activity. Also shown in Table 7 is income of \$1.2 million representing TCDRS' share of the 2022 equity portfolios' securities-lending income.

H: FEES AND COMMISSIONS

Table 8, on page 59, presents the 2022 investment managers' fees TCDRS incurred, excluding securities-lending fees.

Note that all returns presented throughout this annual report are reported net of the amounts reported in Table 8.

¹ See Nondepartment Managers' Fees on page 51.

Alternative Investment Fees

The investment management fees included in Investment Activity Expenses presented in the Statement of Changes in Fiduciary Net Position represent only those paid directly from the Pension Trust Fund and do not include fees incurred and charged by general partners in partnerships investing in private equity, distressed debt, direct lending, strategic credit, private real estate and hedge funds, as these types of fees are netted directly against returns for those investments in accordance with FASB ASC 820. In the interest of greater transparency, fees and profit shares associated with these types of investments are disclosed in Table 8, based on information requested and received from fund general partners in conjunction with the annual audit.

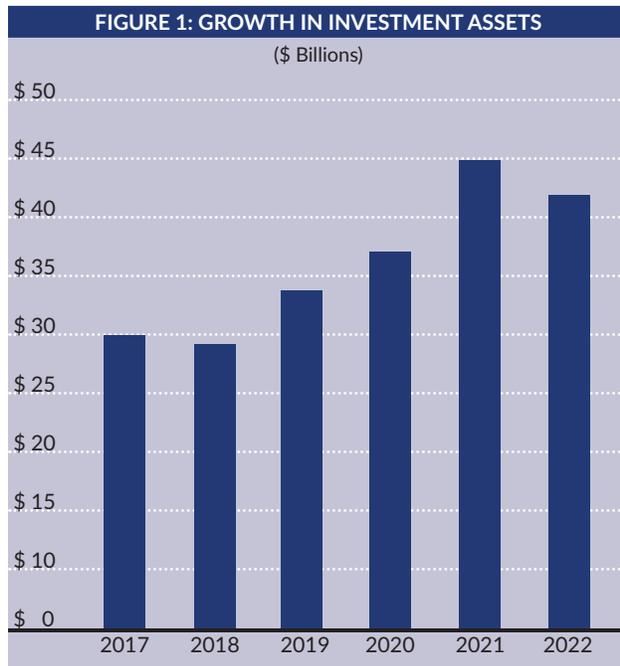

The investment expenses related to TCDRS' investments in partnerships investing in private equity, distressed debt, direct lending, strategic credit, private real estate and hedge funds fall into the categories of management fees and profit sharing (also called "carried interest").

Management fees typically range from 1.5% to 2% of the value of invested assets (hedge funds and strategic credit) or committed capital (private equity, private real estate, distressed debt and direct

lending) and are intended to compensate the general partner for its costs in operating the partnership.

Profit sharing or carried interest incentivizes and aligns the general partner's interest with TCDRS' interest. The carried interest represents the general partner's share of the partnership's profits, typically 20%, with 80% going to the limited partners such as TCDRS. Carried interest earned by hedge funds and strategic credit funds is generally accrued monthly and paid annually since the underlying investments are relatively liquid and more easily valued. Due to the long-term nature of private equity, private real estate, distressed debt and direct lending partnerships (typically 8 to 12 years) and the illiquidity associated with the underlying investments, carried interest is accrued over the life of the partnership but is usually not finalized until the fund is fully liquidated. Generally, an agreed rate of return, or preferred return, must first be surpassed before carried interest is earned by the general partner. To incentivize general partners to maintain performance over the life of a partnership, periods of negative performance may result in previously accrued carried interest being reduced or "clawed back". During such periods, negative carried interest expense would be reported.

The fees reported in Table 8 are those that directly impact TCDRS' various partnership investments.

General partners may receive additional economic benefits from their management of the partnerships in accordance with the partnerships' governing documents.

Table 9 presents the commissions paid to brokers by the system's equity managers. The managers executed trades of 103.3 million shares through 42 brokers. The \$2.0 million in commissions earned by these brokers represents a cost of \$.02 per share traded.

I: ASSET GROWTH OF THE SYSTEM

As shown in Figure 1, the total value of TCDRS' investment assets, including accrued interest and dividends, has increased by \$12 billion over the past five years (from \$29.9 billion at Dec. 31, 2017 to \$41.9 billion at Dec. 31, 2022). The decrease of investment assets in 2022 was attributable to a -5.8% investment return along with net cash outflows as the system has reached a stage in its maturity where cash flow from employee deposits and employer contributions is slightly less than the amounts required to meet annual benefits, withdrawals and administrative expenses.

TABLE 9: BROKER COMMISSIONS PAID BY EQUITY MANAGERS

Year Ended Dec. 31, 2022

Brokerage Firm	Shares Traded (Thousands)	Commissions

J: INVESTMENT SUMMARY

The total value of the portfolio and each asset class at Dec. 31, 2022, is shown in Table 10 on page 61 and is composed of the fair value of the underlying investments plus the amount of accrued interest and dividends, if any. The values shown in each asset class under the column labeled "Fair Value" are the investment amounts presented in the Statements of Fiduciary Net Position shown on page 26 in the Financial Section of this annual report.

ACTUARIAL

RUSK COUNTY LOBLOLLY PINE

A Long-Term Approach

At 138 feet tall, the Rusk County Loblolly Pine recently claimed the title of tallest loblolly pine in Texas, providing a sweeping, bird's eye view of East Texas for miles in all directions. At TCDRS, we take a long-term approach to funding and administration, looking ahead to anticipate how to build up the system today to ensure it continues to grow for many years to come.

Board of Trustees
Texas County & District Retirement System
Austin, Texas

Dear Trustees:

In accordance with the Texas County & District Retirement System (TCDRS) Act, the annual actuarial valuation of the assets and liabilities of TCERS has been completed as of December 31, 2022. This valuation was performed using actuarial assumptions that were adopted by the Board. The economic assumptions were adopted at the March 2021 Board meeting, and the demographic assumptions were adopted at the December 2021 Board meeting.

We believe the assumptions individually and collectively represent reasonable expectations of experience over the long-term future and that all methods and assumptions used for funding and financial reporting are in compliance with the relevant Actuarial Standards of Practice. Nevertheless, the emerging costs of the TCERS employers will vary from those presented to the extent that actual experience differs from that projected by the actuarial assumptions.

To test how well the financing objective for each plan is being achieved, annual actuarial valuations are made. These valuations recognize differences in the past year between the actuarial assumptions and the actual experience, and any benefit changes for each plan.

The financing objective for each TCERS plan is to provide retirement, death, and disability benefits for a county's or a district's employees financed by an employer contribution rate. This rate is determined annually and is designed to remain approximately level from year to year as a percent of the employer's covered payroll. The employer contribution rate consists of the normal cost contribution rate plus the unfunded actuarial accrued liability (UAAL) contribution rate. The UAAL as of December 31, 2020 and any subsequent gains and losses are amortized over closed 20-year periods (open 30-year period if the employer is in an overfunded position). In some cases, the initial closed period for the December 31, 2020 UAAL is amortized over a period shorter than 20 years. Benefit increases are amortized over closed 15-year periods. The methods for calculating the required contribution rates are specified in the funding policy which has been adopted by the Board.

A separate actuarial valuation for each participating county and district was performed based on the plan benefits in effect on January 1, 2023. The aggregate results of the actuarial valuation of system-wide assets and liabilities are presented in the Actuarial Section in the Summary Actuarial Valuation Results schedule. The assumptions and methods used in this valuation are summarized in the actuarial section. The member, annuitant and asset data used in the valuation were all prepared and furnished by TCERS. We relied on that data after examining it for general reasonableness and year-to-year consistency. Please refer to the December 31, 2022 System-wide Actuarial Valuation Report for further disclosures.

Milliman provided the information that TCDRS used in preparing the following tables and figures:

- Financial Section – Table 1: Membership
- Financial Section – Notes to the Financial Statements: TCDRS Bridge Program Health Reimbursement Arrangement

RETIREMENT PLAN: SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

A: ACTUARIAL ASSUMPTIONS

Except as indicated below, the actuarial assumptions for funding valuation purposes described below were developed from an actuarial experience investigation of TCDRS over the years 2017-2020. They were recommended by Milliman, Inc., adopted by the TCDRS Board of Trustees in 2021 and first used in the Dec. 31, 2021 actuarial valuation. For new plans joining TCDRS, employer-specific assumptions for termination rates and payroll increases are assigned based on the size of the employer and other relevant factors.

There were two assumptions that changed for the Dec. 31, 2020 actuarial valuation: the investment return assumption and the price inflation assumption. The change in the price inflation assumption also impacted the salary increases assumption and the payroll growth assumption. They were recommended by Milliman, Inc., adopted by the TCDRS Board of Trustees in Mar. 2021 and first used in the Dec. 31, 2020 actuarial valuation.

More detail can be found in the explanation of the individual assumptions that follows.

Termination Rates

The termination rates are used to estimate future terminations of employment for reasons other than death, disability or retirement. The rates vary by length of service, entry-age group (age at hire) and termination group assignments, and do not apply after an employee is eligible for retirement. Sample rates for three of the seven termination groups are shown in Table 1.

Each employer was assigned to a termination group based primarily upon the termination characteristics of the members of that employer's plan during the years 2017-2020 relative to the termination characteristics of TCDRS membership system-wide during the same period. Consideration was also given to previous experience studies when assigning an employer's termination group to account for the possibility that 2017-2020 experience was out of the ordinary.

For plans that have adopted the partial lump-sum payment option, adjustments are made to the termination rates. Rates are reduced at ages near retirement as it is anticipated that if the partial lump sum is available, members are less likely to terminate employment so they can withdraw their accounts.

Withdrawal Rates

Members who terminate employment with the county or district may either elect to leave their accounts with TCDRS or withdraw their accounts. The likelihood that an active member who terminates employment will elect to withdraw varies by length of service and vesting requirement. Sample withdrawal rates are shown in Table 2.

Entry Age	Years of Service	Male and Female

RETIREMENT PLAN: SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

TABLE 3: DISABILITY RATES

Age	Male and Female Occupational ¹	Male and Female All Causes ²
35	.00001	.000252
40	.00001	.000420
45	.00001	.000740
50	.00001	.001170
55	.00001	.001620
60 and above	.00001	.000000

¹Applicable for non-vested members
²Applicable for vested members who are not eligible for service retirement

Members who have already terminated employment and are neither vested nor active with another TCDRS employer are assumed to withdraw their accounts. Otherwise, they are assumed to defer their benefit until retirement eligible.

Disability Rates

There are two types of disability rates, occupational disability rates (predicts disabilities that occur during the performance of job duties) and all-causes disability rates (predicts all disabilities regardless of whether they occur during the performance of job duties). Before a member is vested, only the occupational disability rates are applicable. For members who are vested, but not eligible for service retirement, the rate of disablement is the all-causes rate. Rates are assumed to be zero after the member is eligible for service retirement. Sample disability rates are shown in Table 3.

Service Retirement Rates

Retirement rates predict when active retirement eligible members will commence receiving benefit payments and are based on a member's age and length of service. Retirement eligible members age 75 or older are assumed to commence receiving benefits immediately. Sample rates are shown in Table 4.

Non-depositing members are assumed to retire at the later of first retirement eligibility or age 60.

Mortality Rates

Depositing members:

135% of the PubG-2010 Employee amount-weighted mortality table for males, and 120% of the PubG-2010 Employee amount-weighted mortality table for females, both projected from 2021 using 100% of the MP-2021 Ultimate Projection Scale.

TABLE 4: SERVICE RETIREMENT RATES

Age	Years of Service			
	Less than 15 Years	Between 15 and 24 Years	Between 25 and 29 Years	Greater than 29 years
40-49	.05250	.06300	.07700	.08750
50-51	.05625	.06750	.08250	.09375
52-53	.06000	.07200	.08800	.10000
54-56	.06750	.08100	.09900	.11250
57-59	.07500	.09000	.11000	.12500
60-61	.09000	.10800	.13200	.15000
62	.13500	.16200	.19800	.22500
63-64	.11250	.13500	.16500	.18750
65-66	.22500	.22500	.27500	.27500
67	.21600	.21600	.26400	.26400
68-69	.18900	.18900	.23100	.23100
70-74	.20700	.20700	.25300	.25300
75 & Over	1.00000	1.00000	1.00000	1.00000

TABLE 5: ANNUAL RATE OF SALARY INCREASE

Years of Service	Entry-Age Group			
	< 30	30-39	40-49	> 50
1	7.6%	7.1%	6.6%	5.8%
3	6.8	6.1	5.6	4.8
5	6.2	5.7	5.2	4.6
10	5.3	4.9	4.5	4.0
15	4.7	4.4	3.9	3.7
20	4.2	4.0	3.6	3.4
25	3.9	3.6	3.4	3.4

Service retirees, beneficiaries and non-depositing members:

135% of the PubG-2010 Healthy Retiree amount-weighted mortality table for males, and 120% of the PubG-2010 Healthy Retiree amount-weighted mortality table for females, both projected from 2010 using 100% of the MP-2014 Ultimate Projection Scale.

Disabled retirees:

160% of the PubG-2010 Disabled Retiree amount-weighted mortality table for males, and 125% of the PubG-2010 Disabled Retiree amount-weighted mortality table for females, both projected from 2010 using 100% of the MP-2014 Ultimate Projection Scale.

Investment Return

A 7.50% annual discount rate is used in the valuation based on the expected long-term investment return of 7.50%. This rate of 7.50% is net of investment and administrative expenses.

RETIREMENT PLAN: SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Salary Increases

The salary increase assumption predicts salary increases for individuals over their projected careers. These rates vary by the employee's length of service and age at hire (entry age). Annual increase percentages consist of a general wage inflation component of 3.00% and a merit, promotion and longevity component that varies from 0.40% to 5.25% based on entry age and service. The 3.00% wage inflation component is based on the underlying price inflation assumption of 2.50% and 0.50% for assumed increases in productivity. The salary scale varies by entry age, with an approximately 4.70% average annual increase over a typical employee's entire career. Because the TCDRS benefit is not based on final average salary, this assumption is generally not as significant as for other defined benefit retirement systems. Refer to Table 5 for sample salary increase rates.

Payroll Increase

The payroll increase assumption projects the rate of growth of the employer's aggregate payroll. The rate varies by employer, with a maximum of 3.00%, or a smaller percentage as considered appropriate based on the employer's number of employees and prior experience. It also assumes no future growth in the number of employees.

Cost-of-Living Adjustment

An annual increase of 0% cost-of-living adjustment for retirees and beneficiaries is assumed. Within certain parameters, employers may elect cost-of-living adjustments for retirees and beneficiaries on an ad hoc basis.

B: ACTUARIAL METHODS

Actuarial Cost Method

For funding calculations, TCDRS uses an entry-age actuarial cost method assuming the current plan provisions have always been in place. The goal of this cost method is to fund benefits in an orderly manner for each participant over his or her career so that sufficient funds are accumulated by the time benefit payments begin. Under this approach, benefits are funded in advance as a level percentage of pay. This part of the contribution rate is called the normal cost rate and generally remains stable from year to year. A portion of the normal cost rate is paid by the employee (employee deposit rate) and the remainder is paid by the employer (employer-paid normal cost rate).

Amortization Policy

The portion of the contribution rate that funds any remaining unfunded amounts for benefits that are not covered by the normal cost is called the unfunded actuarial accrued liability (UAAL) rate. UAAL amounts occur when benefit enhancements are adopted, when actual investment or demographic experience varies from the actuarial assumptions (actuarial gains and losses), or when there are changes in actuarial assumptions or methods.

In general, UAAL amounts are amortized on a level-percentage-of-covered-payroll basis over a closed period with a layered approach. The closed periods ensure all unfunded liabilities are financed over no more than a 20-year period. Each year, new layers are established to amortize changes in the UAAL due to actuarial gains or losses, as well as any plan benefit changes elected by an employer for that year.

Benefit enhancements are amortized over a 15-year closed period. All other changes in the UAAL except for changes due to scheduled amortization are amortized over 20-year closed periods.

For newly participating districts that have five or fewer employees who are all within five years of retirement eligibility, any initial UAAL and any subsequent adoption of prior service credits are amortized over a five-year closed amortization period. This ensures that benefits are appropriately funded over the current generation of employees.

Extra contributions may be made by employers by choosing to pay an elected rate that is greater than the required funding rate or making ad hoc lump-sum contributions. Any extra contributions made as lump sums are first used to offset the UAAL increase, if any, related to plan changes elected during the current year. Any extra contributions from an elected rate or remaining extra contribution amounts from lump sums are then used to pay down existing loss bases, in the order of oldest to most recent. After all existing loss bases have been paid off, any remaining extra contributions are incorporated into the actuarial gains or losses for the current year.

Notwithstanding the layered approach, the total UAAL payment may not be less than the required payment obtained by amortizing the entire UAAL over a 20-year period.

If a plan is overfunded, the overfunded actuarial accrued liability (OAAL) is calculated annually using a 30-year open amortization period.

RETIREMENT PLAN: SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Asset Valuation Method

When determining the actuarial value of assets used for determining required plan funding, TCDRS smooths each year's actuarial investment gains and losses in the following manner. First, any remaining unrecognized asset gains or losses from the previous year are updated to the current year to account for the time value of money using the investment return assumption. Then to the extent that there is a loss for the year and there are unrecognized gains from previous years, or to the extent that there is a gain for the year and there are unrecognized losses from previous years, the gain or loss for the year shall be used to offset unrecognized gains or losses from previous years in the order of oldest to most recent. Any remaining gain or loss for the year is recognized over a five-year period. This better reflects the system's long-term investment horizon and keeps employer contribution rates more stable. As actuarial asset investment gains and losses are recognized, they become part of the actuarial gains and losses for the year and are funded according to the amortization policy. This method ensures that an investment gain and loss for a year will be

recognized within five years, helping to stabilize employer rates while still resulting in rates that are reasonably reflective of current market conditions. In addition, the board has the ability to set aside reserves from investment earnings that are used to help offset future negative economic cycles. These reserves are held separately and are not counted as part of a participating employer's plan assets until they are passed through to employers as determined by the board. Reserves help maintain rate stability for employers. In addition, reserves ensure that employers do not adopt benefit increases based on a temporarily lower plan cost at a high point in a market cycle and, conversely, are not as pressured to immediately reduce benefit levels during a low point in a market cycle.

C: CHANGES IN ACTUARIAL ASSUMPTIONS AND METHODS

There were no changes in actuarial assumptions or methods reflected in the Dec. 31, 2022 actuarial valuation.

RETIREMENT PLAN: SUMMARY ACTUARIAL DATA

SUMMARY ACTUARIAL DATA

Funded Status and Funding Progress

Pension Trust Fund

The funded status of the pension plan as of Dec. 31, 2022, the most recent actuarial valuation date is:

	(\$ Millions)
Actuarial Value of Assets (a)	\$ 40,924.1
Actuarial Accrued Liability (AAL) – Entry Age (b)	\$ 46,194.5
Unfunded AAL (UAAL) (b-a)	\$ 5,270.4
Funded Ratio (a/b)	88.6%
Covered Payroll (c)	\$ 8,657.3
UAAL as a Percentage of Covered Payroll [(b-a) / c]	60.9%

Actuarial valuations of an ongoing plan involve estimates of the value of reported amounts and assumptions about the probability of occurrence of events far into the future. Examples include assumptions about future employment and mortality. Actuarially determined amounts are subject to continual revision as actual results are compared with past expectations and new estimates are made about the future. The schedule of funding progress presents multi-year trend information about whether the actuarial values of plan assets are increasing or decreasing over time relative to the actuarial accrued liabilities for benefits.

Actuarial calculations reflect a long-term perspective. The actuarial methods and assumptions used include techniques that are designed to reduce the effects of short-term volatility in actuarial accrued liabilities and the actuarial values of assets, consistent with the long-term perspective of the calculations.

Additional information as of the latest actuarial valuation for the retirement plan follows:

Valuation Date:	Dec. 31, 2022
Actuarial Cost Method:	Entry age
Amortization Method:	Level percent

¹ Each county and district participating in TCDRS is financially responsible for its own plan. Therefore, the aggregate numbers shown above reflect only the aggregate condition of TCDRS and are not indicative of the status of any one plan. The valuations above reflect changes in benefits elected by individual employees.

² The entry-age actuarial cost method is used for all plans. Each valuation above reflects the actuarial cost method, assumptions and benefits in effect as of the valuation date.

³ The annual covered payroll is based on the employee deposits received by TCDRS for the year ending with the valuation date.

⁴ Revised economic and demographic assumptions due to an experience review were first used in this valuation.

⁵ Revised economic assumptions due to an experience review were first used in this valuation.

⁶ Revised demographic assumptions due to an experience review were first used in this valuation.

RETIREMENT PLAN: SUMMARY OF PLAN PROVISIONS

A: ORGANIZATION

TCDRS is a statewide, agent multiple-employer, public-employee retirement system that provides the employees of participating counties and districts with retirement, disability and survivor benefits. Each county and district that participates in TCDRS maintains its own customized plan of benefits which may be changed annually. The governing body of each employer has the option to adopt or change plan provisions based on their needs and budget.

Each employer has a savings-based defined benefit plan where member benefits are based on each member's account balance at retirement and employer matching. All plan assets are pooled for investment purposes, but each employer's plan assets may be used only for the payment of benefits to the members of that employer's plan. This summary describes the plan provisions in general terms. Any questions related to the actual administration, provisions or policies of the retirement plans should be directed to TCDRS.

B: MEMBERSHIP

All full- and part-time non-temporary employees become members in TCDRS, regardless of the number of hours they work in a year. Employees in a temporary position are not eligible for membership.

C: TERMINATION OF MEMBERSHIP

TCDRS membership is terminated by a member's death, retirement, or withdrawal of a member's account.

D: MEMBER DEPOSITS

TCDRS is a savings-based plan. Every paycheck, a portion of each employee's pay — from 4% to 7% as set by the employer — is deposited into his or her TCDRS account. By law, member accounts earn 7% interest annually.

E: SERVICE

Members receive a month of service for each month that they make a deposit into their account. Service may also be granted for periods of employment prior to the employer joining TCDRS, and for military and certain other service.

Within TCDRS, all periods of service with any TCDRS participating employers are combined. Also, service periods with other Texas public retirement

plans participating with TCDRS in the Texas Proportionate Retirement Program are combined to satisfy TCDRS retirement eligibility and vesting requirements.

F: ELIGIBILITY REQUIREMENTS

Service Retirement Benefits

The amount of service a member needs to earn a future monthly benefit is called the vesting requirement. When a member is vested, he or she has the right to a monthly benefit at age 60 or older. Employers may choose 5-, 8- or 10-year vesting. In addition, members may retire before age 60 if they meet one of the following requirements, set by the employer:

- "Rule of" eligibility: Under these rules, vested members can retire if their age plus years of service time add up to at least 75 or 80.
- 20-year or 30-year retirement at any age: This lets members retire when they have at least 20 or 30 years of service time.

Disability Retirement Benefits

A member who is vested and who is totally and permanently disabled is eligible for an immediate disability retirement benefit. A member who is not vested is eligible for an immediate disability retirement benefit if the total and permanent disability was a result of an on-the-job injury.

Survivor Benefits

Benefits are payable to the beneficiaries or estate of a deceased member. The eligibility requirement for an employer-provided survivor benefit is four years of TCDRS service. Otherwise the survivor benefit is the deceased member's account balance.

G: DETERMINATION OF RETIREMENT BENEFITS

The service or disability retirement benefit is calculated based on the member's account balance and employer matching as selected by the employer, and may include other employer provided funds. The employer matching can range from a "dollar for dollar," up to \$2.50 per \$1.00 in the member's account. The member's account and employer provided funds are combined and converted to a lifetime annuity. The retiree receives a payment every month for the rest of his or her life. Conversions to a lifetime annuity are based on a 7% discount rate and the following mortality assumptions:

RETIREMENT PLAN: SUMMARY OF PLAN PROVISIONS

- The portion of the benefit that accrues before 2018, including member deposits made before 2018 and interest and employer matching on those deposits, shall be calculated based on the UP-1984 table with an age setback of five years for retirees and an age setback of 10 years for beneficiaries, with a 30% reserve refund assumption for the single life option.
- The portion of the benefit that accrues after 2017, including member deposits made after 2017 and interest and employer matching on those deposits, shall be calculated on a generational mortality basis using the RP-2000 Combined Mortality Table, with a one-year set-forward for males and no set-forward for females, projected to 2014 using Scale AA and for projections after 2014 using 110% of MP-2014 Ultimate Projection Scale, with a 32.79% reserve refund assumption for the single life option. Mortality assumptions for these calculations are blended 50% male and 50% female for retirees, and blended 30% male and 70% female for beneficiaries.

Retirees elect to receive their monthly lifetime benefit by choosing from one of the following seven actuarially equivalent payment options:

- **Single Life option** – Monthly payments cease upon death of the retiree. This option provides the highest monthly benefit.
- **Guaranteed Term Benefit options** – The two guaranteed term benefit options are 10-year guaranteed term and 15-year guaranteed term. These options provide a lifetime monthly benefit to the retiree. In addition, if the retiree passes away within 10 or 15 years of the retirement date, the beneficiary will receive the monthly benefit until the end of the guaranteed term.
- **Dual Life options** – The four dual life options are 100% to beneficiary, 75% to beneficiary, 50% to beneficiary and 100% to beneficiary with pop-up. Under each of these options, after the death of the retiree, the beneficiary receives a monthly lifetime benefit equal to the selected percentage of the retiree's benefit payment. Under the 100% to beneficiary with pop-up option, if the beneficiary dies before the retiree, the monthly benefit amount will "pop up" to a higher monthly amount, as if the retiree had retired under the single life option.

All options pay a death benefit equal to the excess of the person's account at retirement over the total monthly benefits that have been paid.

Each employer may allow partial lump-sum payments. This allows the retiring member to receive an

immediate lump-sum payment, not to exceed his or her account balance, and choose a reduced monthly lifetime benefit from any of the payment options.

H: FUNDING PROVISIONS

Contributions are made monthly by both the employees and the employers based on covered payroll.

Each year the actuary determines the required contribution rate for the following year to adequately fund each employer's benefit plan using the actuarial methods described beginning on page 68. Employers may also elect to fund at a rate higher than the required rate, and may also make additional lump-sum contributions.

I: CHANGES IN PROVISIONS

There were no system-wide changes in plan provisions reflected in the Dec. 31, 2022 actuarial valuation.

Effective each Jan. 1 and within the parameters described previously in the summary of plan provisions, each TCDRS plan may make certain changes to their benefit levels, vesting, retirement eligibility and other plan provisions. The Dec. 31, 2022 actuarial valuation reflects plan provisions in effect for each plan as of Jan. 1, 2023.

Board of Trustees
Texas County & District Retirement System
Austin, Texas

Dear Trustees:

The Group Term Life Fund (GTLF) is an optional cost-sharing multiple-employer defined benefit plan that is administered by the Texas County & District Retirement System. It provides death benefits to active and, if elected, retired employees of participating employers. The financing objective of the GTLF is to operate as a group term insured benefit, charging each employer its premium based on current actuarial assumptions and its own demographic membership (number of active and retired members covered by GTLF). The funding of the GTLF is in accordance with Section 845.406 of the TCDRS statute. Contribution rates are established as a percentage of pay.

Milliman annually determines contribution rates for those employers that elect to participate in the GTLF for the Group Term Life Fund (GTLF). Additionally, Milliman performs GASB 75 financial reporting valuations of employers participating in the GTL who have elected both active and retiree coverage. It is our understanding that GASB 74 reporting is not required for the GTLF as it is not an Other Post-Employment Benefit (OPEB) trust, because it covers both actives and retirees.

The GTLF provides death benefits to both active and retired members. Each participating employer can elect to cover just active members, or active and retired members. The required contribution rates for funding purposes are equal to a premium rate that is individually determined for each participating employer annually and is based on the mortality and service experience of all employees and retirees covered by the fund and the demographics specific to the workforce of the participating employer. The rate is expressed as a percentage of the compensation of members employed by the participating employer. The required contributions are determined using a one-year term cost funding method.

Milliman provided the summarized information about the GTLF that TCDRS has used in preparing the following tables:

- Actuarial Section – Table 15: GTLF – Retirees Covered
- Actuarial Section – Table 16: GTLF – Retirees Coverage Amounts
- Actuarial Section – Table 17: GTLF Participating Employers and Covered Members

The assumptions and methods used in the funding calculations are also summarized in the actuarial section.

Sincerely,

Matt Larrabee, FSA, EA, MAAA
Consulting Actuary

Nick J. Collier, ASA, EA, MAAA
Consulting Actuary

GTLF: SUMMARY OF ACTUARIAL ASSUMPTIONS, METHODS AND DATA

A: ACTUARIAL ASSUMPTIONS AND METHODS

The actuarial assumptions for funding valuation purposes described below were developed from an actuarial experience investigation of TCDRS over the years 2017–2020. They were recommended by Milliman, Inc., adopted by the TCDRS Board of Trustees in 2021 and first used in the Dec. 31, 2021 actuarial valuation.

Mortality Rates

Same as for retirement plan.

Actuarial Value of Assets

All assets are valued at fund value. The fund's assets are pooled with those of the Pension Trust Fund under provisions of the TCDRS Act.

Actuarial Cost Method

For funding purposes, the term cost method is used for determining the cost of one-year term life insurance for both active employees and retirees. The one-year term cost is 80% of the rate determined by applying the mortality rate assumptions. This takes into account the size of the GTLF relative to the expected benefit payments and the statutory requirement that the GTLF be credited annually with 7% interest. The only demographic assumptions used for determining funding requirements are active employee mortality rates and retiree mortality rates.

Changes in Actuarial Assumptions and Methods

There were no changes in actuarial assumptions or methods, reflected in the Dec. 31, 2022 actuarial valuation.

B: PLAN PROVISIONS

Participation in the Group Term Life Plan

Employers who participate in the TCDRS retirement plan may elect to participate in the Group Term Life plan. Employers may elect to cover members who are active employees only or both members who are active employees and retirees, and may elect to change or discontinue coverage annually.

Benefit Eligibility

The county or district must have elected the applicable Group Term Life coverage for the calendar year in which a member who is an active employee or retiree dies.

Amount of Insurance Benefit

If death occurs while the member is actively employed, the benefit is an amount equal to the employee's most recent regular annualized salary. The insurance benefit payable to retirees is \$5,000.

GTLF: SUMMARY OF ACTUARIAL ASSUMPTIONS, METHODS AND DATA

TABLE 15: GTLF – RETIREES COVERED

Year Ended	New Retirees Added	Retirees Removed	Net Change in Retirees	Total Number of Retirees ¹	Percent Change in Number Covered

READER'S NOTES

FIVE STATISTICAL

GOLIAD ANACUA, GOLIAD COUNTY

Steady and Disciplined

Sometime in the 1800s, Goliad State Park's famous Anacua tree grew up from the ruins of the Espiritu Santo mission. The area has undergone significant changes, including the restoration of the mission, but the Goliad Anacua has remained a constant through it all. Since our inception in 1967, TCDRS has been a pillar of steadfastness by staying rooted in funding discipline.

ANACUA (EHRETIA ANACUA)

INTRODUCTION

The Statistical Section provides additional detail to assist you in interpreting the information in the Financial Statements, Notes to Financial Statements and Required Supplementary Information. The information is presented in two main categories: Financial Trends Data and Demographic and Operating Information.

The Financial Trends Data illustrates how TCDRS' financial position has changed over time. The changes in net position for the last 10 fiscal years show additions by source, deductions by type and the total change in Pension Trust Fund and Group Term Life Fund (GTLF) net position for each year. The pension benefit expenses by type gives data on benefits paid and withdrawal deductions for the last 10 fiscal years.

The Demographic and Operating Information provides details about TCDRS' operations and membership. The schedule of New Retiree Average Benefits gives the average monthly benefit and number of retired members, organized by five-year increments of credited service, for the last 10 fiscal years. Data is given for both pension benefits and for GTLF benefit payments. This section also includes information on the number of annuitants grouped by age and by type of benefits, along with a description of the retirement payment options. The schedule of largest participating employers compares the number of current members for those employers for the most recent year end and as of nine years ago.

Totals	82,031			82,031							

¹ Includes Alternate Payees of Retirees.

² Retirement payment option is no longer available to new retirees.

RETIREMENT BENEFIT PAYMENT OPTIONS

All options pay the retiree a monthly benefit for life and, when a retiree passes away, guarantee that the total benefit paid will equal, at a minimum, the total accumulated contributions of the retiree.

Single Life

Payments cease upon the death of the retiree.

15-year Guaranteed Term

If the retiree dies within 15 years of retirement, the beneficiary will receive the same monthly payment as the retiree for the balance of the 15-year period, at which time payments cease.

10-year Guaranteed Term

If the retiree dies within 10 years of retirement, the beneficiary will receive the same monthly payment as the retiree for the balance of the 10-year period, at which time payments cease.

50% to Beneficiary

At the death of the retiree, the beneficiary will receive 50% of the retiree's monthly payment throughout the beneficiary's life.

75% to Beneficiary

At the death of the retiree, the beneficiary will receive 75% of the retiree's monthly payment throughout the beneficiary's life.

100% to Beneficiary

At the death of the retiree, the beneficiary will receive 100% of the monthly amount paid to the retiree throughout the beneficiary's life.

100% to Beneficiary with Pop-up

If the beneficiary survives the retiree, monthly payments equal to 100% of the monthly amount paid to the retiree continue to the beneficiary for life. If the retiree outlives the beneficiary, the monthly payment amount will increase (pop up) after the beneficiary's death to the higher amount of the Single Life option.

Number of payments	112	351
2022		
Average benefit payment	\$48,261	\$5,000
Number of payments	77	302

GLOSSARY

ACTUARIAL ACCRUED LIABILITY

The portion, as determined by the actuarial cost method, of the Actuarial Present Value of pension plan benefits and expenses that is not provided for by future Normal Costs.

ACTUARIAL ASSUMPTIONS

In order to estimate the cost of funding benefits, the actuaries use long-term assumptions. Examples include mortality, termination, disablement and retirement; changes in salary; payroll growth; investment returns and other relevant items. Actuarial assumptions are adopted by the board of trustees upon recommendation of the consulting actuaries. The assumptions are reviewed every four years.

ACTUARIAL GAIN (LOSS)

The difference between actual results and what was projected to happen based on Actuarial Assumptions during the period between annual Actuarial Valuations.

ACTUARIAL PRESENT VALUE

The calculated value of a series of projected cash flows expressed in present day dollars as of the valuation date using actuarial assumptions.

ACTUARIAL VALUATION

The process to calculate the employer contribution rate. This process determines the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets and Actuarial Present Values.

ACTUARIAL VALUE OF ASSETS

The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

ACTUARIALLY EQUIVALENT PAYMENT OPTIONS

Different benefit payment options that pay different amounts per month, but are of equal value at the time the option is selected.

ALERIAN MLP INDEX

This index is a benchmark for energy infrastructure Master Limited Partnerships that includes MLPs which earn the majority of their cash flow from midstream activities. The index is calculated using a capped, float-adjusted, capitalization-weighted methodology.

BENCHMARK PORTFOLIOS

Portfolios represented by specific indices that are created for the purpose of measuring the relative performance of investment managers, asset classes and, in the case of the Policy Benchmark Portfolio, the entire TCDRS portfolio. Data regarding performance of these benchmark portfolios during any period indicate the returns that were available during the period for comparable investments that were passively managed. Comparisons indicate the value added by each manager, if any, in excess of the performance that was experienced by the specific benchmark index.

BLOOMBERG COMMODITIES INDEX

This index is composed of futures contracts on physical commodities. It provides broad-based exposure to commodities, with no single commodity or sector dominating the index. The liquidity and diversity of the benchmark make it suitable for institutional investment.

BLOOMBERG U.S. AGGREGATE BOND INDEX

This index incorporates all domestic debt issues with maturities greater than one year and in amounts greater than \$1 million. Included are publicly issued, nonconvertible, domestic debt issues of the U.S. government and its agencies and corporations in industrial, utility or financial segments.

BLOOMBERG U.S. 10-YEAR BREAKEVEN INFLATION INDEX

This index is designed to provide access to 10-year breakeven inflation by capturing the returns of a simultaneous long position in 10-year inflation linked securities and a short position in suitable nominal comparator U.S. Treasury bonds.

CAMBRIDGE ASSOCIATES DISTRESSED SECURITIES INDEX

A custom benchmark index provided by Cambridge Associates based on data compiled from more than 325 distressed debt funds, including fully liquidated partnerships with first cash flows beginning in 2005. The benchmark return is net of fees, expenses and carried interest.

CAMBRIDGE ASSOCIATES GLOBAL PRIVATE EQUITY & VENTURE CAPITAL INDEX

A custom benchmark index provided by Cambridge Associates based on data compiled from approximately 3,700 global private equity

and venture capital funds, including fully liquidated partnerships, with first cash flows beginning 2006. The benchmark return is net of fees, expenses and carried interest.

CAMBRIDGE ASSOCIATES REAL ESTATE INDEX

A custom benchmark index provided by Cambridge Associates based on data compiled from more than 750 global private real estate funds, including fully liquidated partnerships with first cash flows beginning 2007. The benchmark return is net of fees, expenses and carried interest.

COMMODITIES

Investment in resources that can be perishable (grains, sugar, etc.) and non-perishable (metals, energy, etc.). Commodities provide protection against inflation and have low correlation to stocks and other asset classes.

DIRECT LENDING

Privately originated debt made to small to medium-sized companies or to real estate investors in order to take advantage of disruptions in the banking system.

DISTRESSED DEBT

Distressed debt investments are investments in partnerships that purchase the debt of companies experiencing financial distress ranging from deteriorating financial conditions to bankruptcy. Strategies employed include trading, participating in restructuring transactions and controlling bankruptcy proceedings.

DOW JONES U.S. TOTAL STOCK MARKET INDEX

This index is one of the broadest measures of domestic equity performance since it is computed based upon all equity trades of U.S. stocks during any day. Each company included within the index is not equally weighted within the index, but rather is weighted according to its market value among the market values of all U.S. companies.

EMPLOYER REQUIRED CONTRIBUTION RATE

The percentage of payroll the employer is required to contribute to fund future benefits for their current employees, former employees and retirees. It is the sum of the Normal Cost Contribution Rate and the Unfunded Actuarial Accrued Liability Contribution Rate.

ENTRY-AGE ACTUARIAL COST METHOD

An actuarial cost method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings or service of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a Valuation Date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

FOREIGN CURRENCY FORWARD CONTRACTS

Forward contracts are over-the-counter agreements between two parties to buy and sell a currency at a set price on a future date. The contracts are marked-to-market on each valuation date with any resulting unrealized appreciation or depreciation recorded on such date. Realized gains or losses equal to the value of the contract when it was opened and the settlement amount at the time the contract is closed (or rolled) are recorded upon receipt of the currency.

FTSE HIGH-YIELD CASH-PAY INDEX

This index includes cash-pay bonds with a below-investment-grade rating by both Moody's Investor Services and Standard & Poor's. The bonds must have a maturity of at least one year and a minimum amount outstanding of \$250 million.

FTSE NAREIT ALL EQUITY REIT INDEX

This index gives a broad exposure to U.S. publicly traded equity REITs in every property sector.

FTSE NAREIT EQUITY REITS INDEX

This index contains all Equity REITs across the U.S. economy not designated as Timber REITs or Infrastructure REITs.

GLOBAL EQUITY

Investments in stocks included in all public markets, both domestic and international.

HEDGE FUND RESEARCH INSTITUTE (HFRI) FUND OF FUNDS COMPOSITE INDEX

This index consists of funds that each manage a group of diverse hedge funds. Fund of Funds invests with multiple managers through funds or managed accounts. The strategy designs a diversified portfolio of managers with the objective of significantly lowering the risk (volatility) of investing with an individual manager. The Fund of Funds manager has discretion in choosing which strategies to invest in for the portfolio.

GLOSSARY

HEDGE FUNDS

An investment strategy applied to a variety of different investments to help manage risk within the entire portfolio. Over a full market cycle, hedge funds produce risk-adjusted returns to help mitigate losses during market downturns.

HIGH-YIELD BONDS

Domestic fixed-income securities that have not been highly rated by national rating agencies, such as Moody's Investors Service (Moody's) or Standard & Poor's (S&P). A security is considered a high-yield bond if it is rated below Baa3 by Moody's or below BBB- by S&P. To pay for the risk, the interest rates earned are higher than investment-grade bonds.

INVESTMENT-GRADE BONDS

The investment-grade bonds portfolio consists of debt securities issued by the U.S. Treasury or an agency or government-sponsored entity (GSE) of the United States (U.S. government); mortgage-related instruments, U.S. dollar-denominated fixed-income securities issued by U.S. and foreign corporations; and U.S. dollar-denominated debt issued by foreign governments and supranationals. Additionally, these portfolios may contain minimal investments in short-term instruments, non-rated securities, private placement securities, convertible bonds and preferred stock. The portfolio should exhibit an overall dollar-weighted average quality rating of AA.

MASTER LIMITED PARTNERSHIPS (MLPS)

Publicly traded partnership interests created by Congress to encourage investment in domestic energy infrastructure. At the entity level, these interests are tax free provided that 90% of their income comes from natural resources such as oil, natural gas, coal, timber and other depletable resources.

MORNINGSTAR LSTA US LEVERAGED LOAN TR USD INDEX

This index is a market value-weighted index designed to measure the performance of the U.S. leveraged loan market based upon market weights, spreads and interest payments.

MSCI EAFE INDEX (EUROPE, AUSTRALASIA, FAR EAST)

This index, prepared by Morgan Stanley Capital International (MSCI), is designed to measure developed market large and mid-cap equity performance excluding the United States and Canada.

MSCI EMERGING MARKETS (EM) INDEX

This index, prepared by Morgan Stanley Capital International (MSCI), captures large and mid-cap equity performance across 24 emerging market countries with more than 1,300 constituents.

MSCI WORLD EX U.S.

This index, prepared by Morgan Stanley Capital International (MSCI), is designed to measure developed market equity performance excluding the United States.

MSCI WORLD INDEX (NET)

This index, prepared by Morgan Stanley Capital International (MSCI), is a broad global equity index that represents large and mid-cap equity performance across developed markets countries.

NORMAL COST

The portion of the Actuarial Present Value of pension plan benefits and expenses that is allocated to a valuation year by the actuarial cost method.

NORMAL COST CONTRIBUTION RATE

This is the rate required to fund current employees' benefits over their projected careers. It is equal to the Actuarial Present Value at hire of Projected Benefits divided by the Actuarial Present Value at hire of anticipated future compensation. It is calculated for each contributing member and the average is weighted by compensation.

OPPORTUNISTIC CREDIT

Comprises investments primarily in debt instruments that provide return opportunities resulting from dislocations in capital markets.

OVERFUNDED ACTUARIAL ACCRUED LIABILITY (OAL)

The excess, if any, of the Actuarial Value of Assets over the Actuarial Accrued Liability.

PLAN YEAR

The period from Jan. 1 to Dec. 31 inclusive.

PRIOR SERVICE

Benefits attributable to an amount provided by the employer for service rendered by an employee prior to employer participation in TCDRS.

PRIVATE EQUITY

Private partnerships that (a) take public companies private in order to improve their operations and resell them in the future; (b) invest in start-up companies with new ideas or technologies; and (c) invest in companies seeking to discover, produce, and transport energy products.

PRIVATE REAL ESTATE

Non-publicly traded vehicles that invest in a broad array of real estate properties and ventures. Private real estate investments are expected to be very illiquid and long term in nature. The vehicles for private real estate investments are typically partnerships, but may also include other entities such as limited liability companies or offshore corporations.

PROJECTED BENEFITS

Retirement benefit amounts that are estimated to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such factors as the effect of advancement in age, and past and anticipated future compensation and service time.

REITS

Real estate investment trusts are companies that own and operate income-producing real estate, such as commercial office buildings, apartments, malls, warehouses and storage facilities. Under provisions of the U.S. tax law, if REITs pay out most of their income, they do not pay income taxes. This means higher income earnings along with any increase in the value of the real estate.

S&P GLOBAL REIT INDEX (NET)

This index serves as a comprehensive benchmark of publicly traded equity REITs listed in both developed and emerging markets.

STRATEGIC CREDIT

Portfolio comprised of high-yield bond and opportunistic credit portfolios.

TIPS

Treasury Inflation-Protected Securities are bonds issued by the U.S. Treasury just like other U.S. government bonds. However, the principal amount of TIPS increases with the rate of inflation so that inflation does not decrease the value of the bond. They provide a way to protect against inflation.

UNFUNDED ACTUARIAL ACCRUED LIABILITY (UAAL)

The excess, if any, of the Actuarial Accrued Liability over the Actuarial Value of Assets.

UNFUNDED ACTUARIAL ACCRUED LIABILITY CONTRIBUTION RATE

The amount needed to amortize the Unfunded Actuarial Accrued Liability over a closed period of 20 years or less, expressed as a percent of payroll. If the plan has an Overfunded Actuarial Accrued Liability, it is amortized over an open period of 30 years, and the resulting negative Unfunded Actuarial Accrued Liability Contribution Rate is offset against the Normal Cost Contribution Rate.
